What is Angular 2?

What are the core concepts of Angular 2?

What's wrong with Angular 2?

Why Angular 2 is awesome?

Should I use Angular 2 in my next project?

What is Angular 2?

Angular is a development platform for building mobile and desktop applications

Angular is a development platform for building
mobile and **desktop** applications

Core concepts of Angular 2

- Directives
- Components
- Pipes
- Services
- Dependency Injection

Directives

**Primitive used for encapsulation of
basic UI related logic**

tooltip.ts

```
@Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
export class Tooltip {
  private overlay: Overlay;
  private tooltip: string;
  constructor(private el: ElementRef, manager: OverlayManager) {
    this.el = el;
    this.overlay = manager.get();
  }
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  }
  onMouseLeave() {
    this.overlay.close();
  }
}
```

tooltip.ts

```
@Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
export class Tooltip {
  private overlay: Overlay;
  private tooltip: string;
  constructor(private el: ElementRef, manager: OverlayManager) {
    this.el = el;
    this.overlay = manager.get();
  }
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  }
  onMouseLeave() {
    this.overlay.close();
  }
}
```

tooltip.ts

```
@Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
export class Tooltip {
  private overlay: Overlay;
  private tooltip: string;
  constructor(private el: ElementRef, manager: OverlayManager) {
    this.el = el;
    this.overlay = manager.get();
  }
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  }
  onMouseLeave() {
    this.overlay.close();
  }
}
```

**What a minute...
this looks like Java**

**Angular 2 is written in
TypeScript**

Microsoft

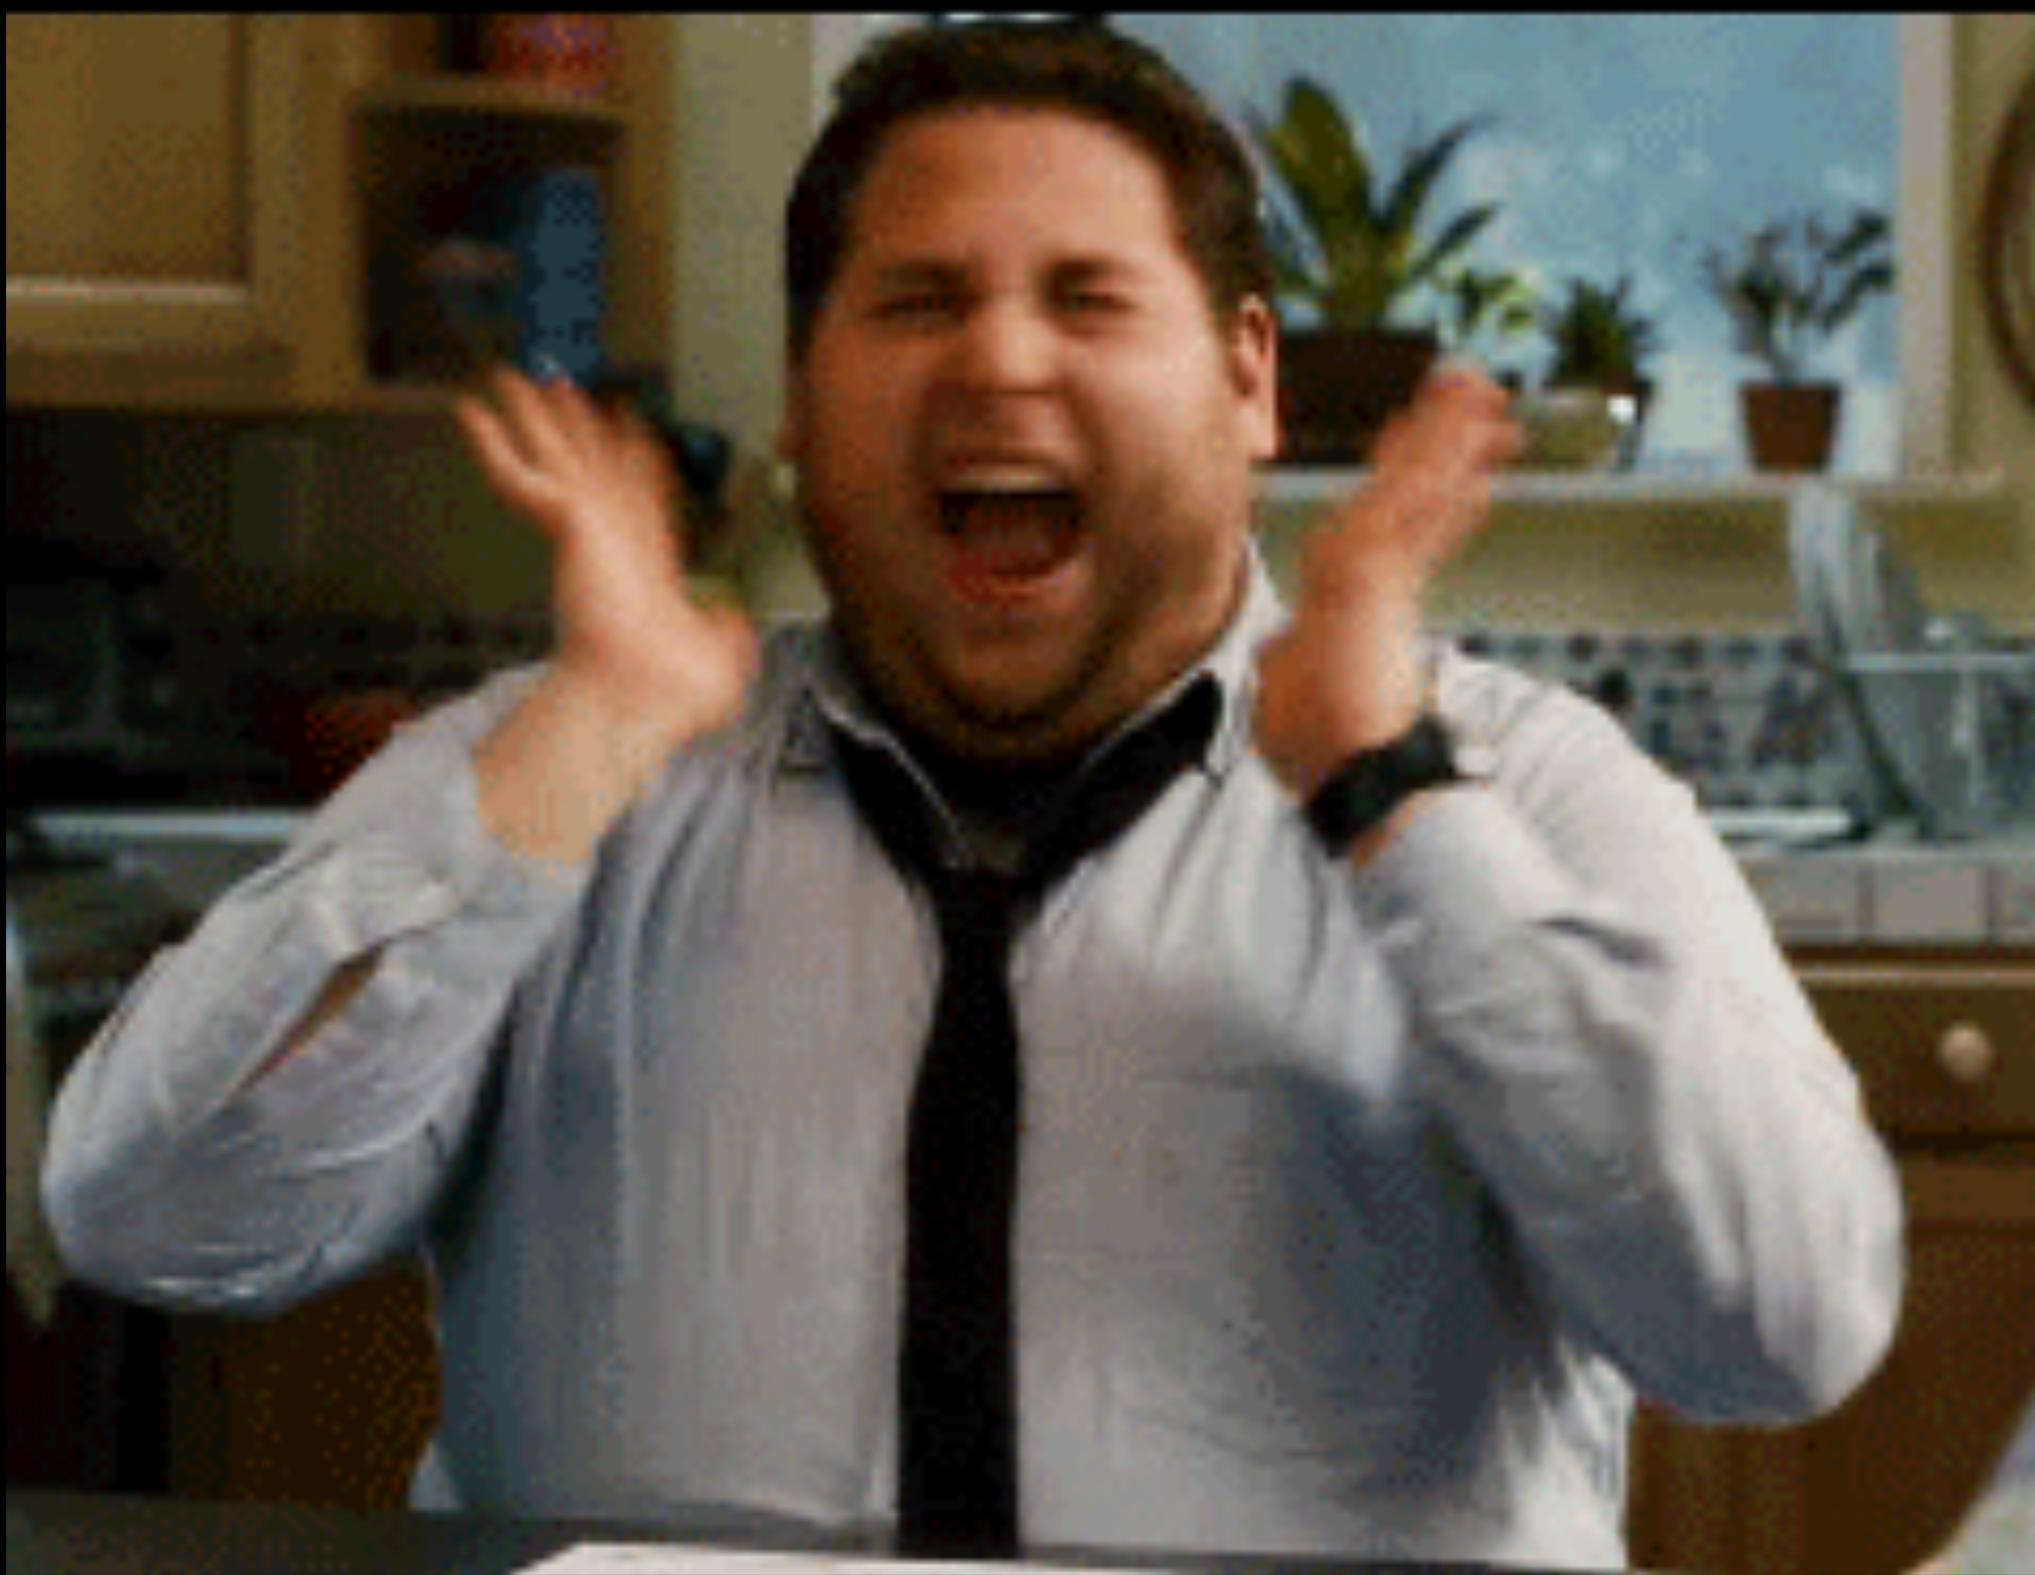

TypeScript is...

superset of ECMAScript

optional type
checking

open source

...you can still use **ES5...**

tooltip.js

```
var Tooltip = ng.Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
.Class({
  constructor: [ng.Inject(ng.ElementRef),
    ng.Inject(OverlayManager),
    function (tooltip, el, manager) {
      this.el = el;
      this.overlay = manager.get(tooltip);
    }],
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  },
  onMouseLeave() {
    this.overlay.close();
  }
});
```

tooltip.js

```
var Tooltip = ng.Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
.Class({
  constructor: [ng.Inject(ng.ElementRef),
    ng.Inject(OverlayManager),
    function (tooltip, el, manager) {
      this.el = el;
      this.overlay = manager.get(tooltip);
    }],
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  },
  onMouseLeave() {
    this.overlay.close();
  }
});
```

tooltip.js

```
var Tooltip = ng.Directive({
  selector: '[tooltip]',
  inputs: ['tooltip'],
  host: {
    '(mouseenter)': 'onMouseEnter()',
    '(mouseleave)': 'onMouseLeave()'
  }
})
.Class({
  constructor: [ng.Inject(ng.ElementRef),
    ng.Inject(OverlayManager),
    function (tooltip, el, manager) {
      this.el = el;
      this.overlay = manager.get(tooltip);
    }],
  onMouseEnter() {
    this.overlay.open(this.el, this.tooltip);
  },
  onMouseLeave() {
    this.overlay.close();
  }
});
```

Components

Directives with **views**

hello-world.ts

```
@Component( {  
    selector: 'hello-world'  
} )  
@View( {  
    template: '<h1>Hello, {{this.target}}!</h1>'  
} )  
class HelloWorld {  
    target:string;  
    constructor() {  
        this.target = 'world';  
    }  
}
```

hello-world.ts

```
@Component( {  
    selector: 'hello-world'  
} )  
@View( {  
    template: '<h1>Hello, {{this.target}}!</h1>'  
} )  
class HelloWorld {  
    target:string;  
    constructor() {  
        this.target = 'world';  
    }  
}
```

hello-world.ts

```
@Component ( {  
    selector: 'hello-world'  
} )  
@View ( {  
    template: '<h1>Hello, {{this.target}}!</h1>'  
} )  
class HelloWorld {  
    target:string;  
    constructor() {  
        this.target = 'world';  
    }  
}
```

Pipes

Encapsulate the
data transformation logic

lowercase-pipe.ts

```
@Pipe( {  
    name: 'lowercase'  
} )  
class LowerCasePipe implements PipeTransform {  
    transform(value: string): string {  
        if (!value) return value;  
        if (typeof value !== 'string') {  
            throw new Error('Invalid pipe value', value);  
        }  
        return value.toLowerCase();  
    }  
}
```

Services

**Simply, ES2015 classes which can
be wired together with...**

Dependency Injection

di.ts

```
import { provide, Injector, Injectable }  
from 'angular2/angular2';  
  
@Injectable()  
class DataMapper {  
  constructor(private http: Http) {}  
}  
  
class Http {}  
  
let injector = Injector.resolveAndCreate([  
  provide(Http).toValue(new Http()),  
  DataMapper  
]);  
  
injector.get(DataMapper);
```

di.ts

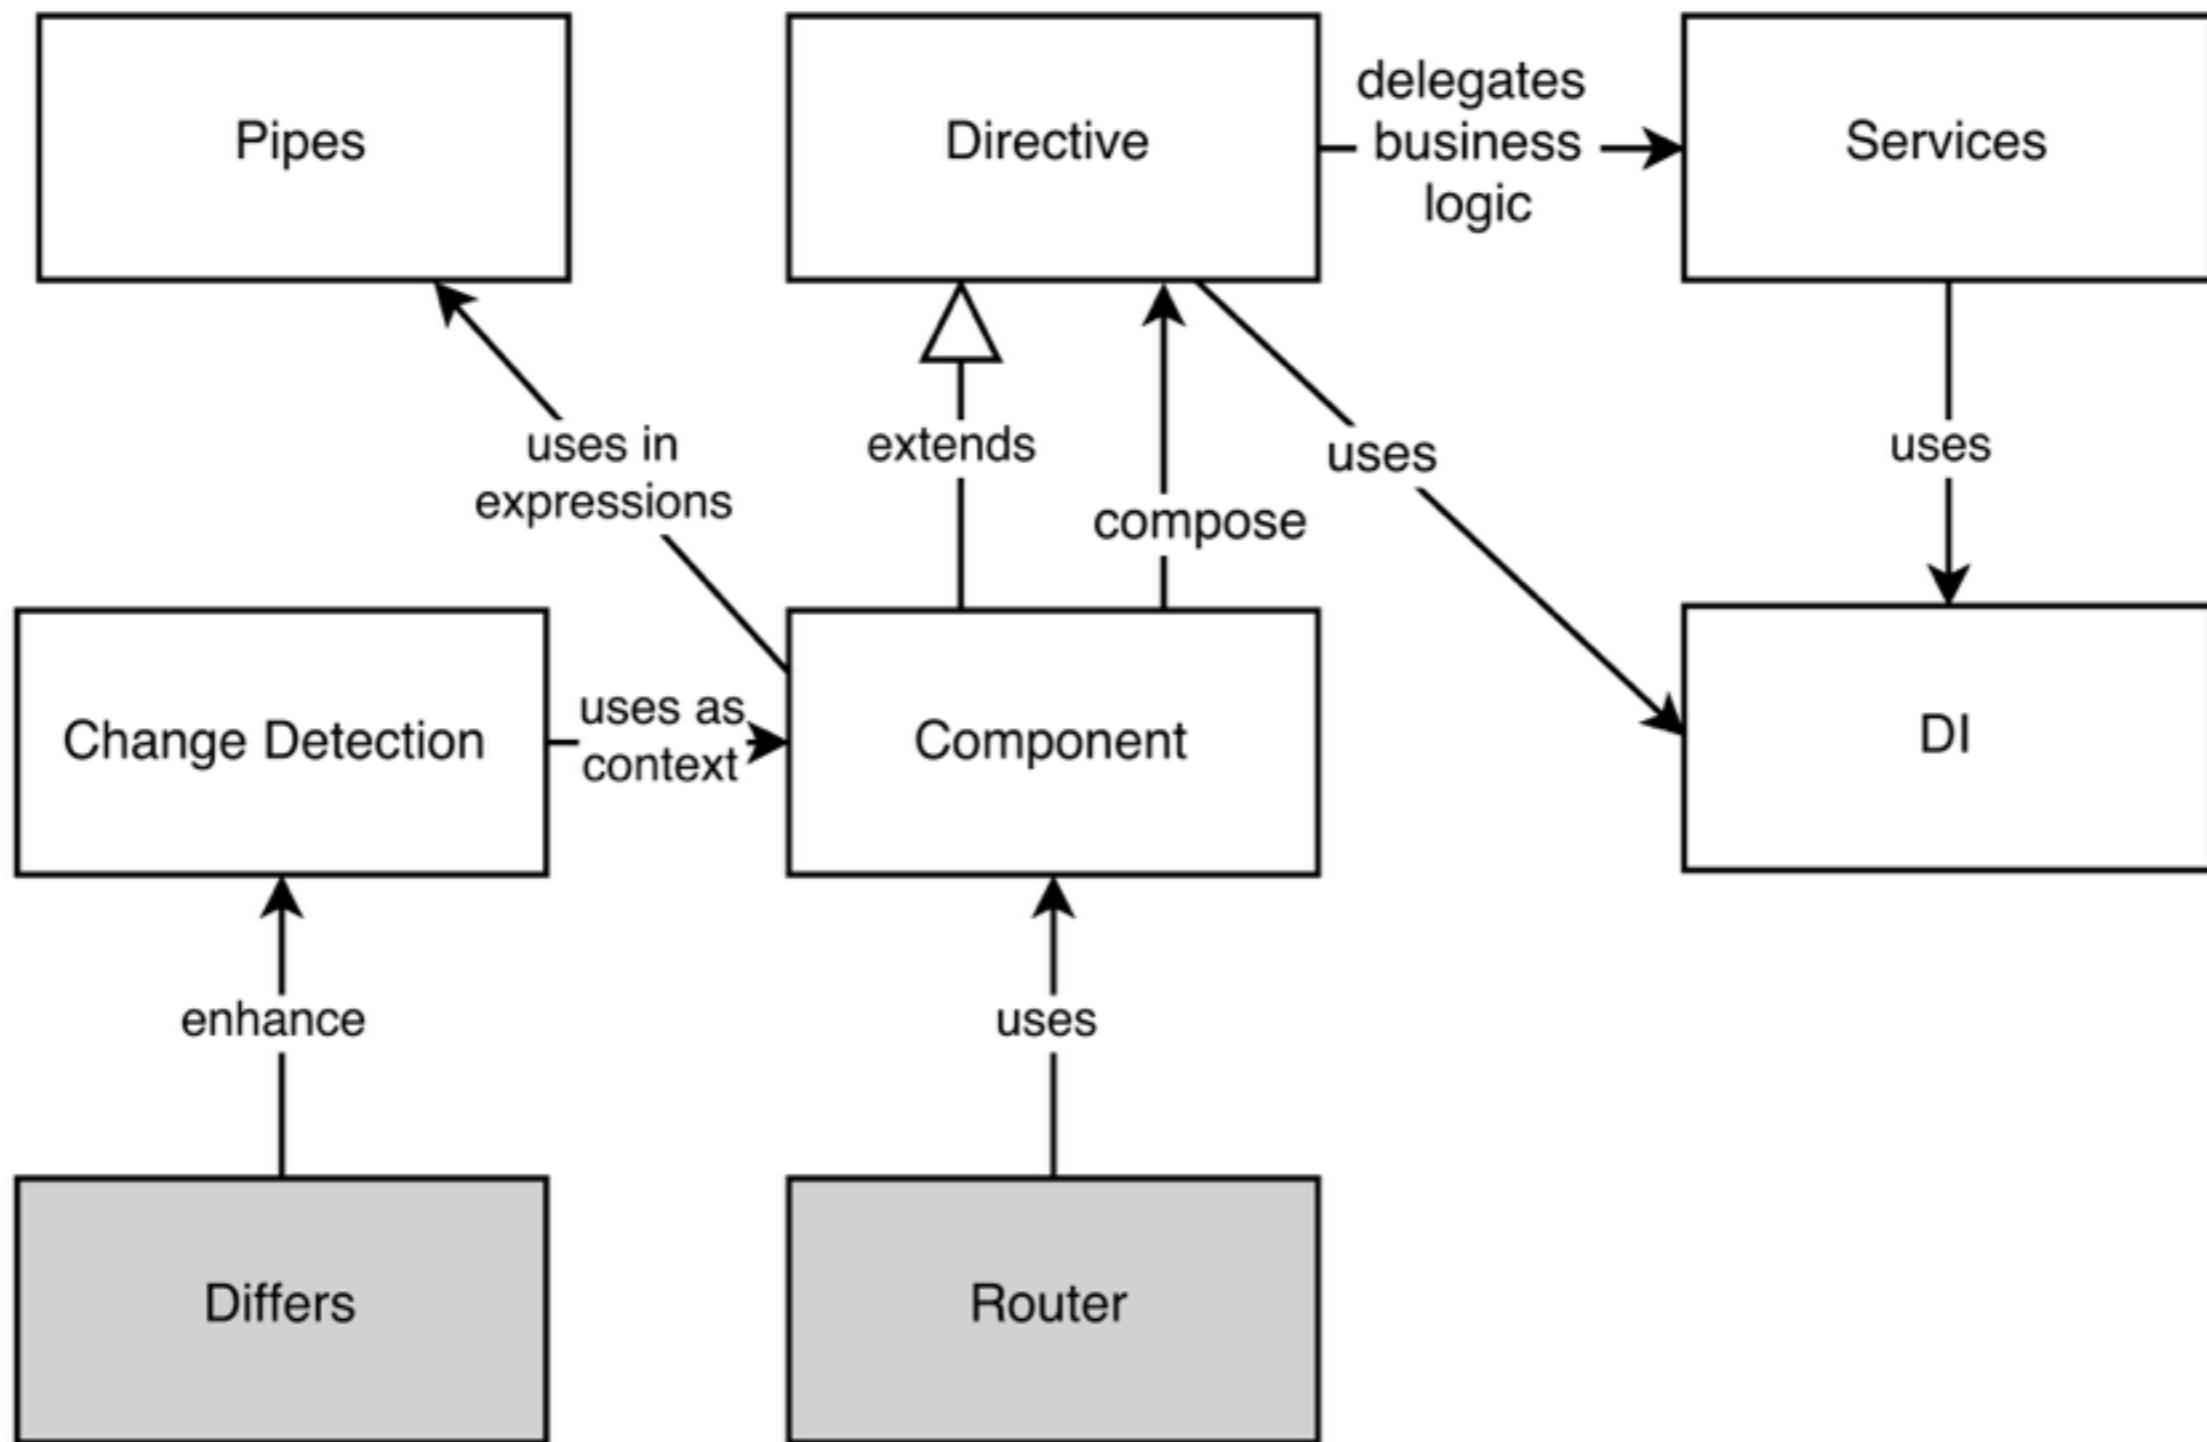

```
import { provide, Injector, Injectable }  
from 'angular2/angular2';  
  
@Injectable()  
class DataMapper {  
  constructor(private http: Http) { }  
}  
  
class Http {}  
  
let injector = Injector.resolveAndCreate([  
  provide(Http).toValue(new Http()),  
  DataMapper  
]);  
  
injector.get(DataMapper);
```

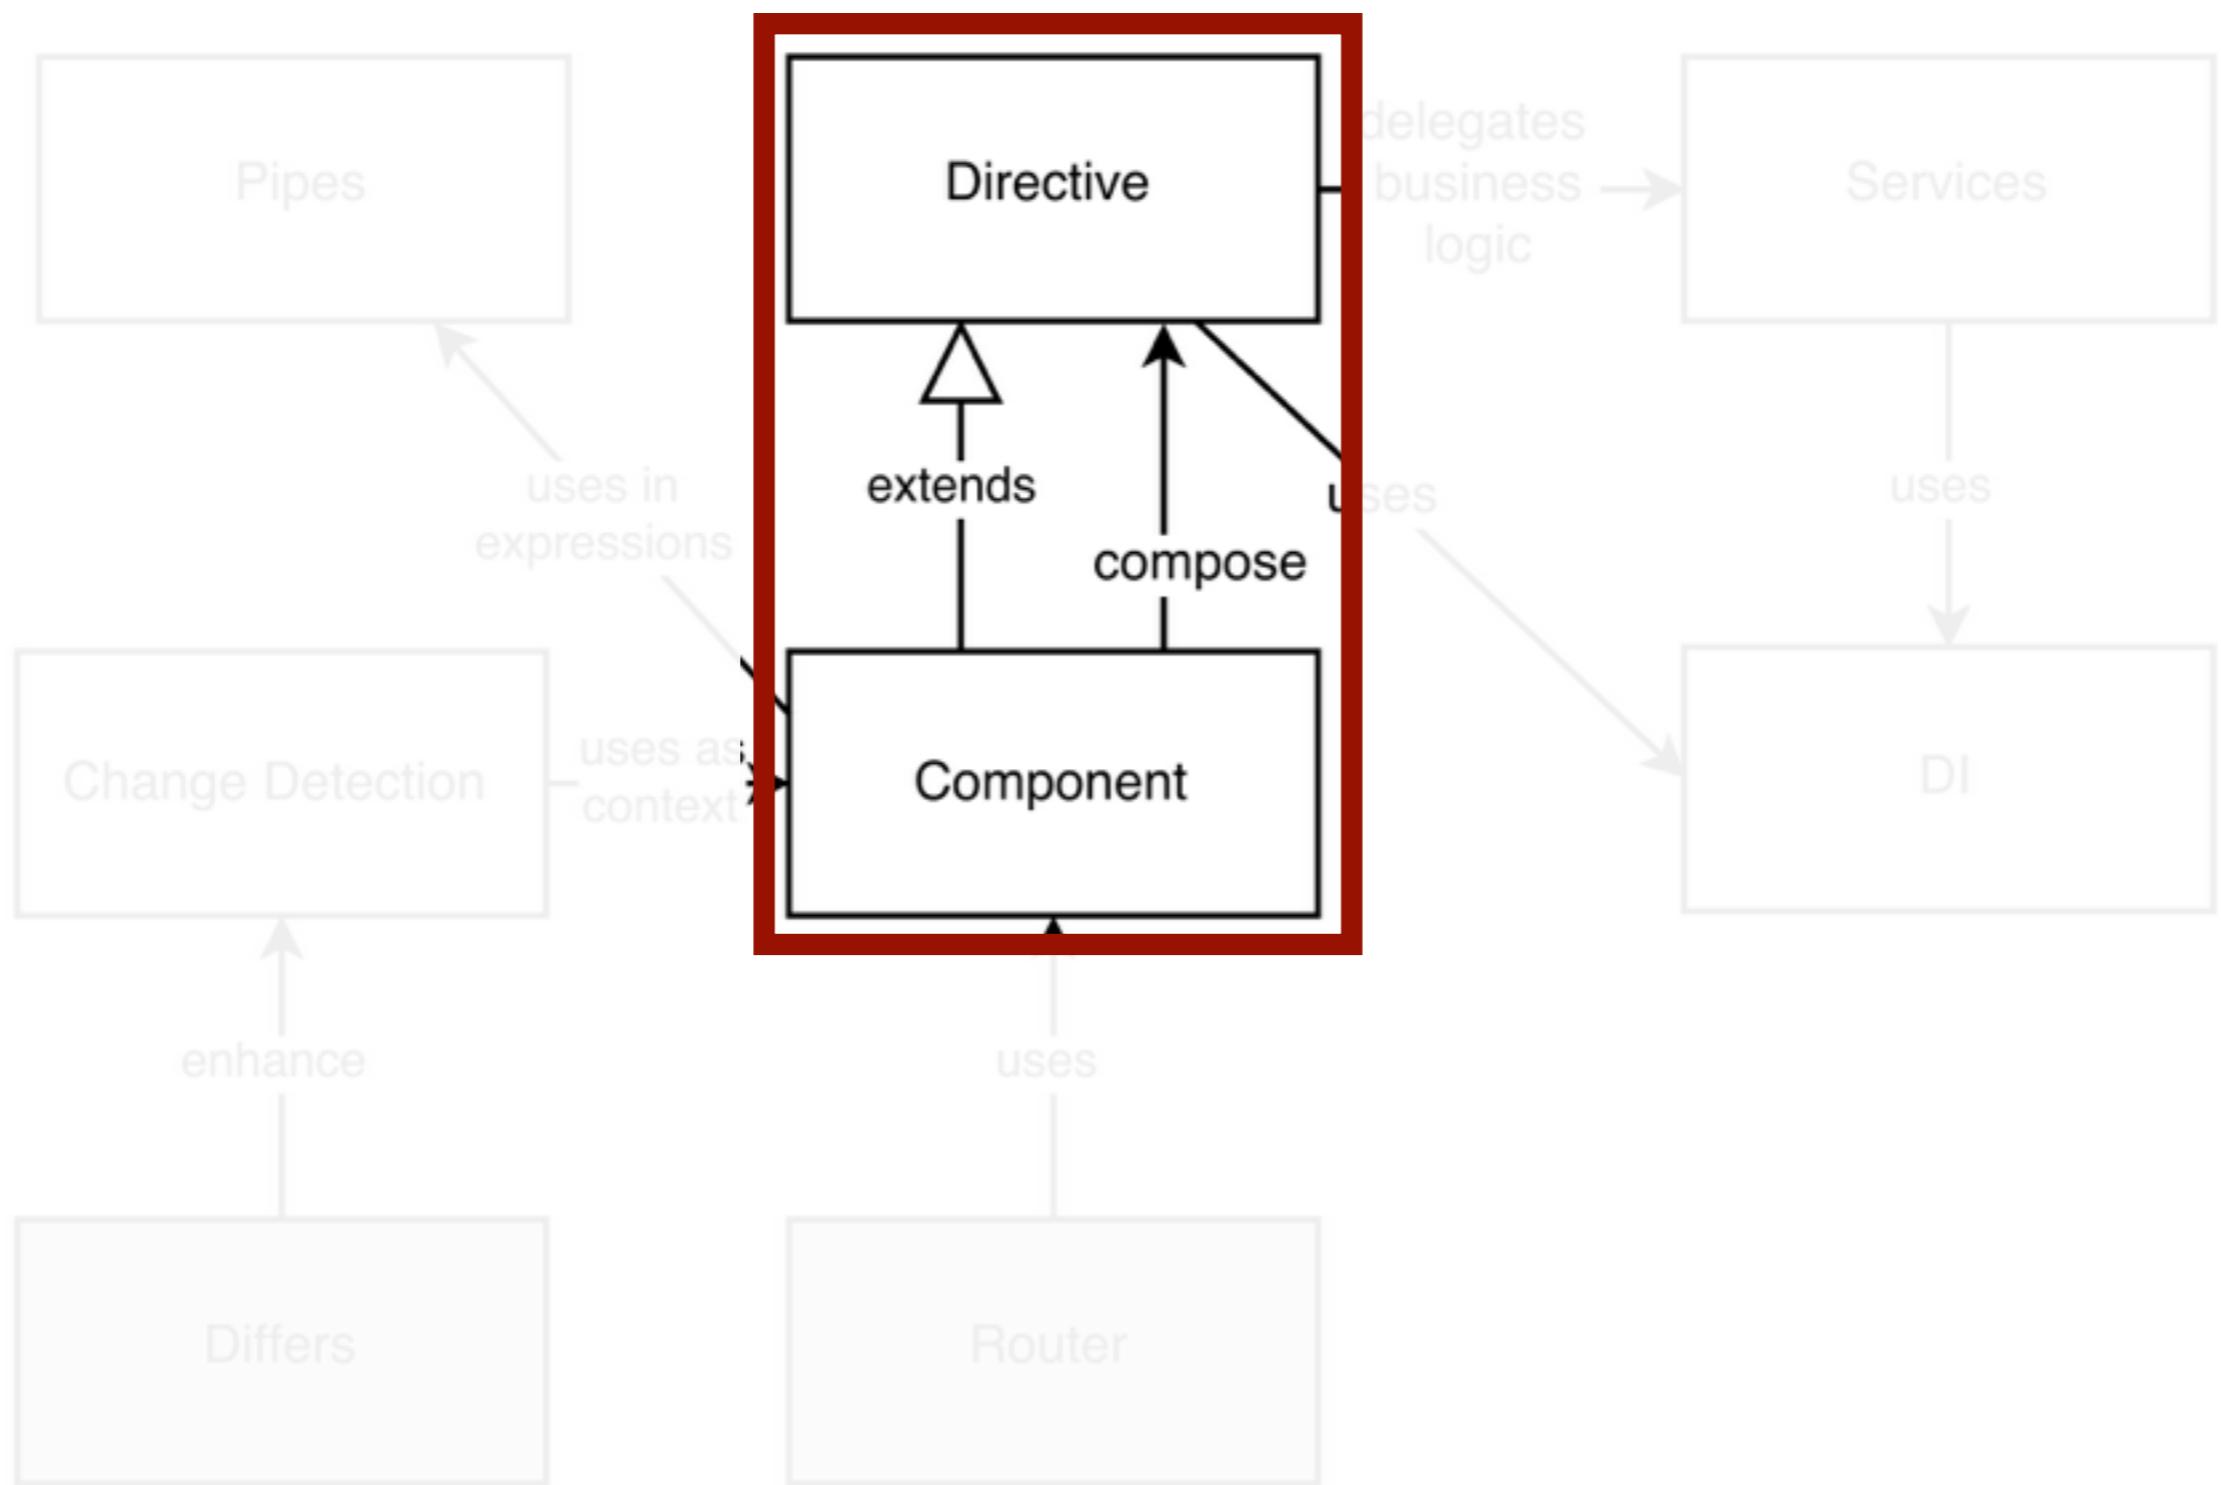

di.ts

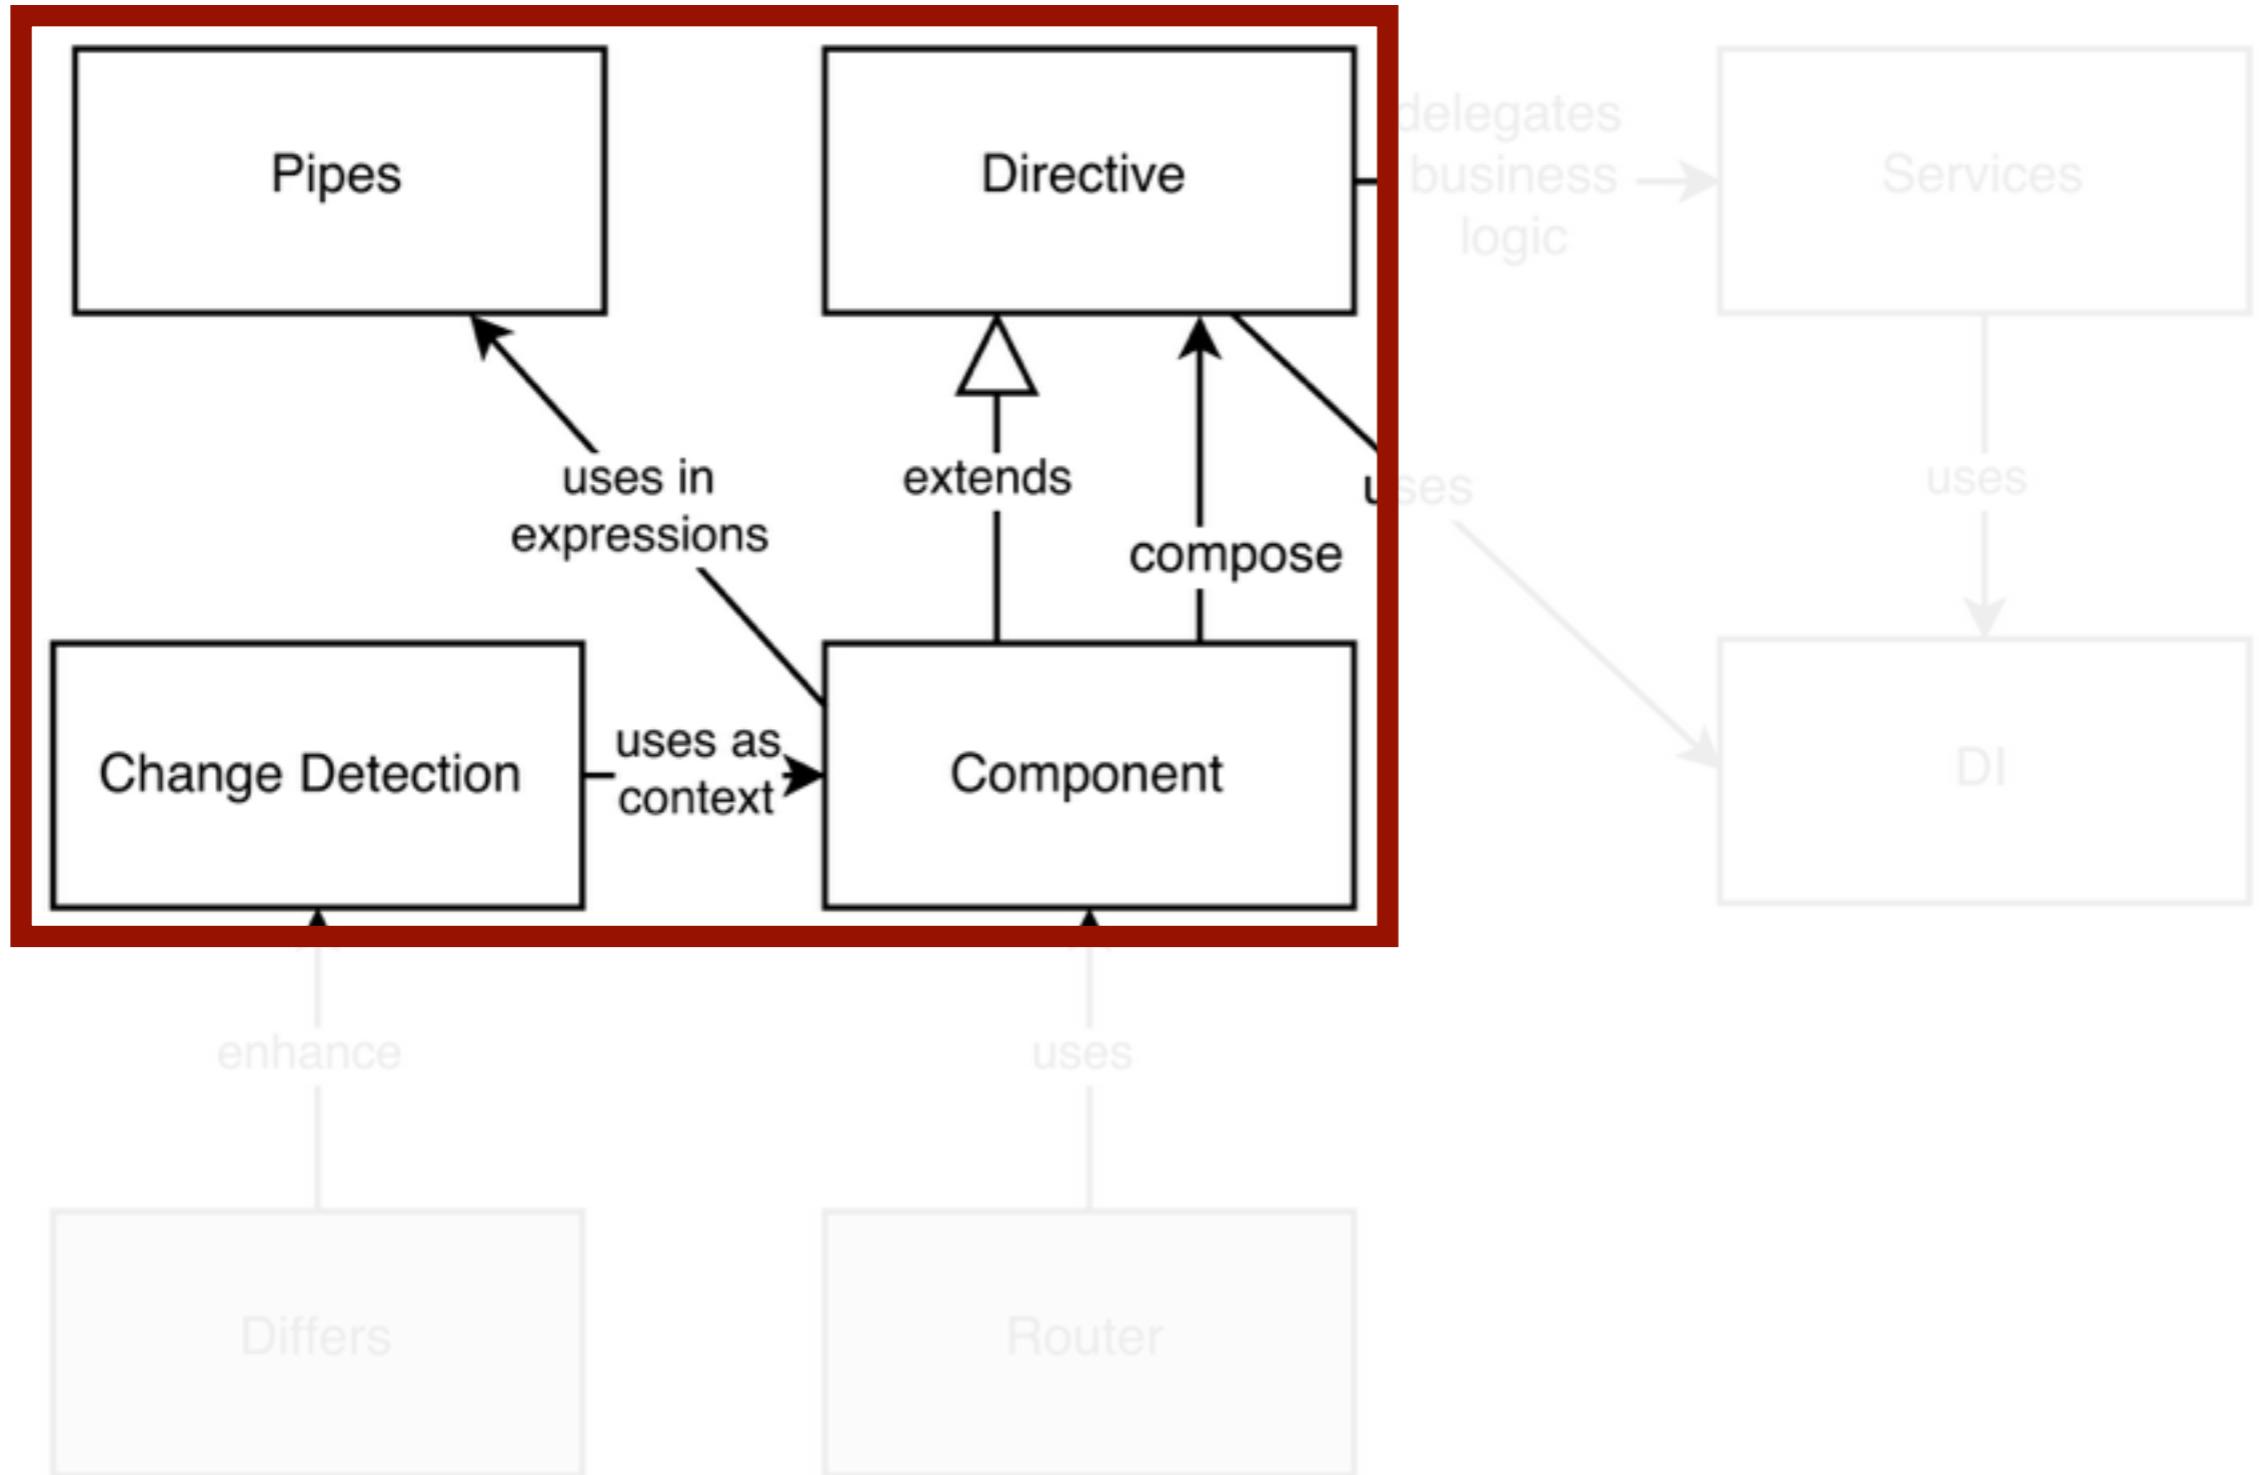

```
import { provide, Injector, Injectable }  
from 'angular2/angular2';  
  
@Injectable()  
class DataMapper {  
  constructor(private http: Http) { }  
}  
  
class Http {}  
  
let injector = Injector.resolveAndCreate([  
  provide(Http).toValue(new Http()),  
  DataMapper  
]);  
  
injector.get(DataMapper);
```

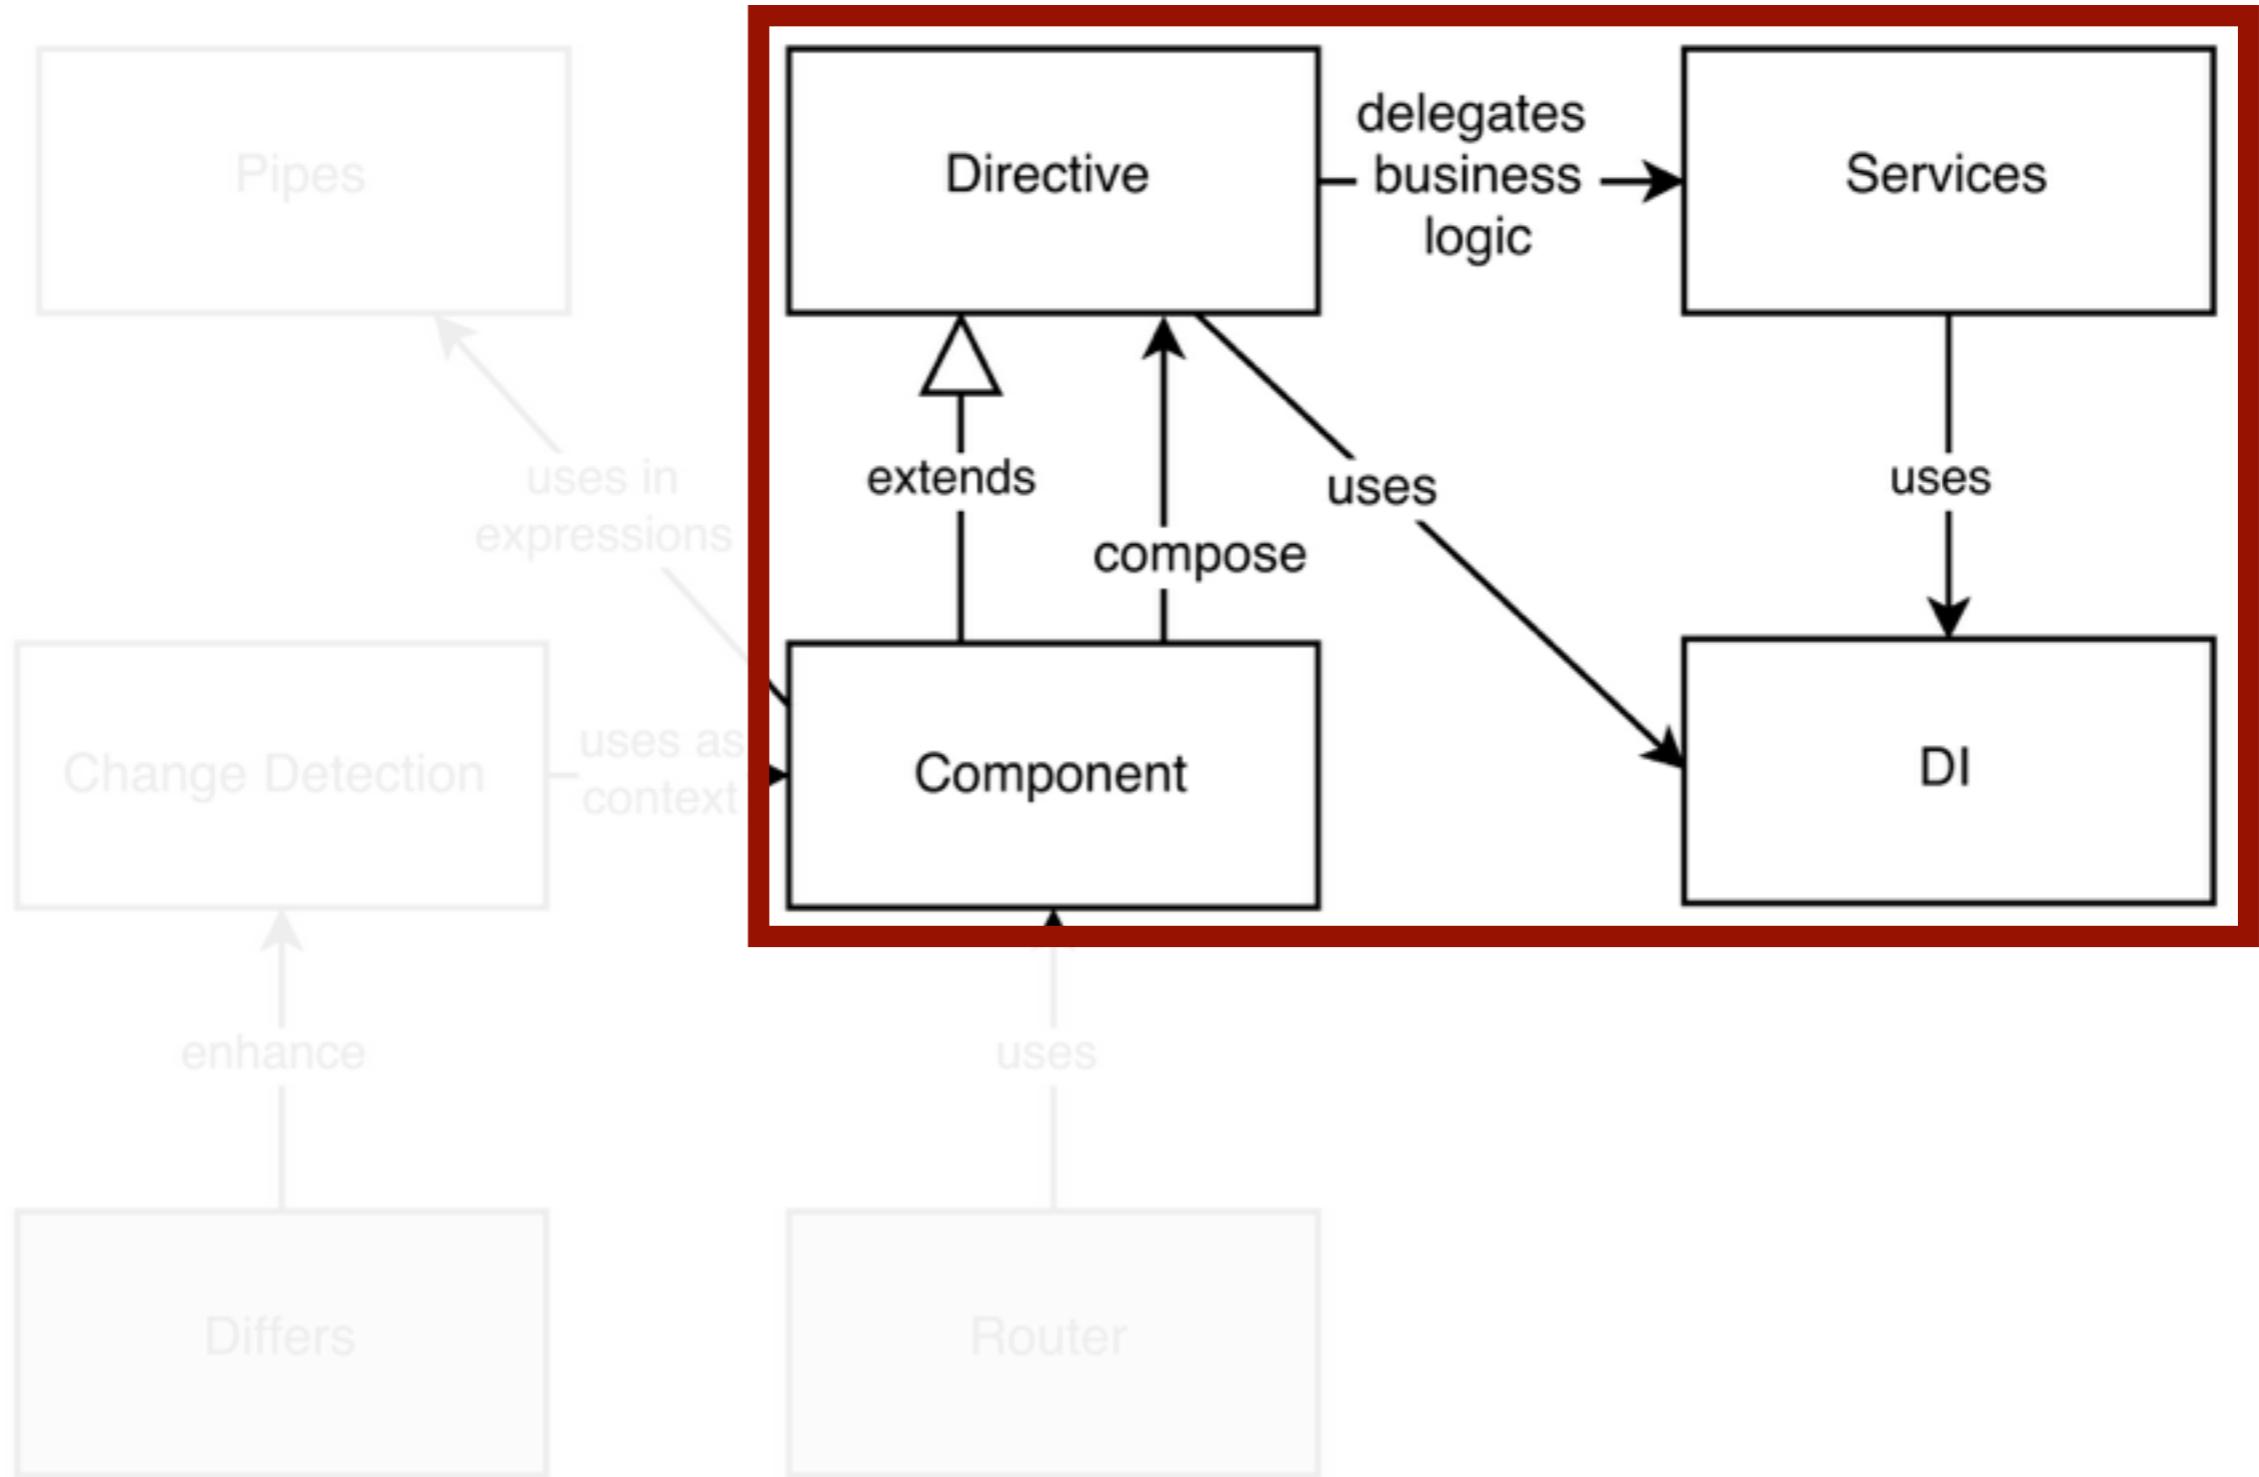

di.ts

```
import { provide, Injector, Injectable }  
from 'angular2/angular2';  
  
@Injectable()  
class DataMapper {  
  constructor(private http: Http) { }  
}  
  
class Http {}  
  
let injector = Injector.resolveAndCreate([  
  provide(Http).toValue(new Http()),  
  DataMapper  
]);  
  
injector.get(DataMapper);
```

Now you know the basics!

Lets take a step back...

Angular is a development platform for building mobile and desktop applications

Angular is a development platform for building
mobile and desktop applications

Angular 2 is platform agnostic

Not coupled with DOM, even HTML

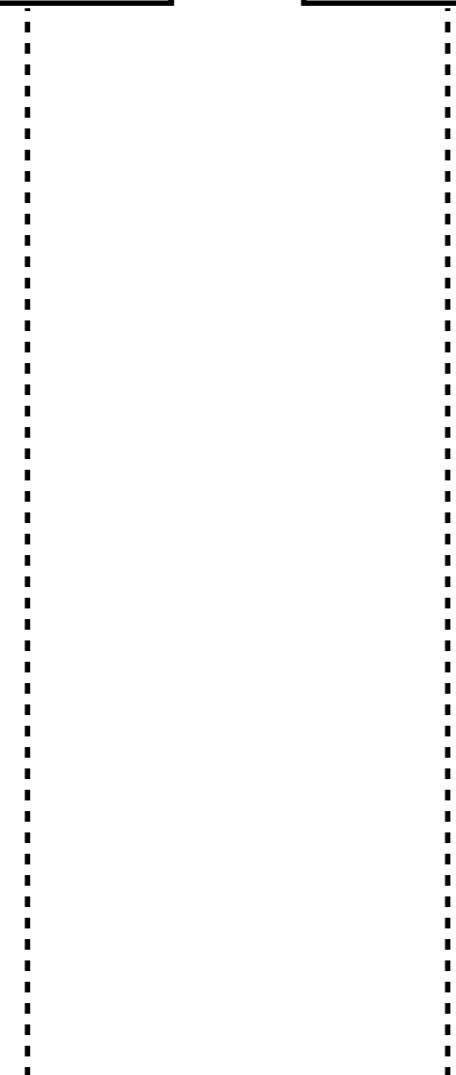

NativeScript

...and even more...

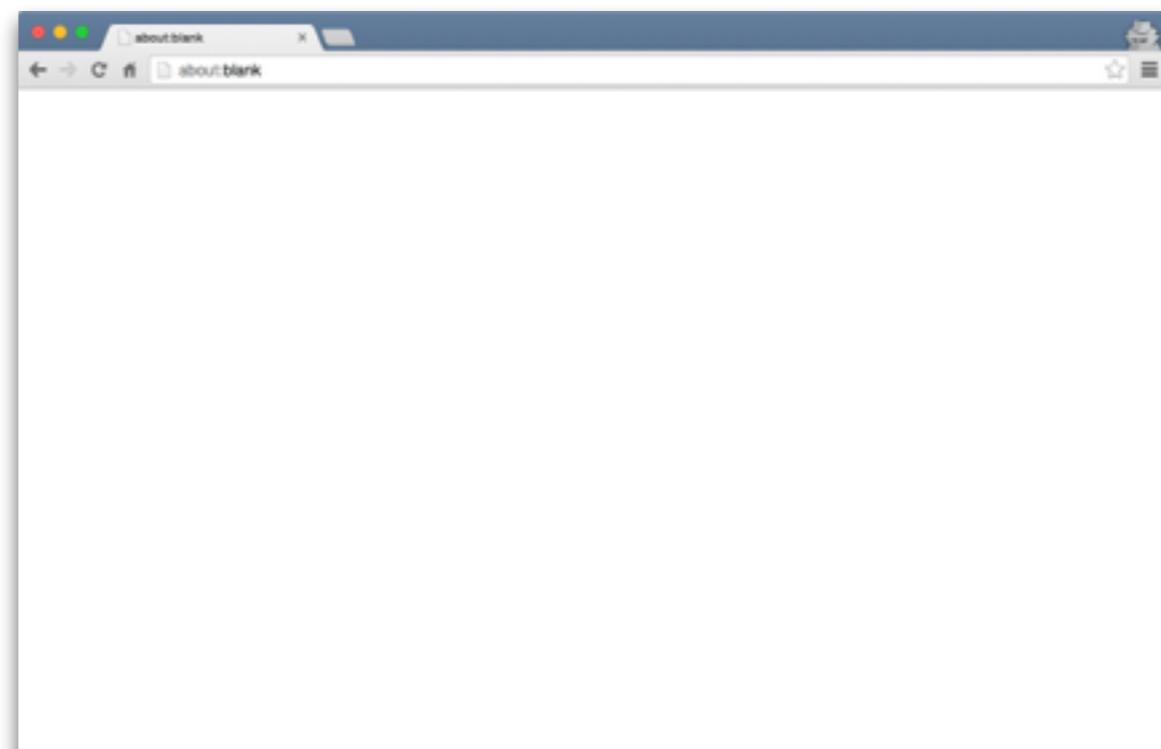

Client

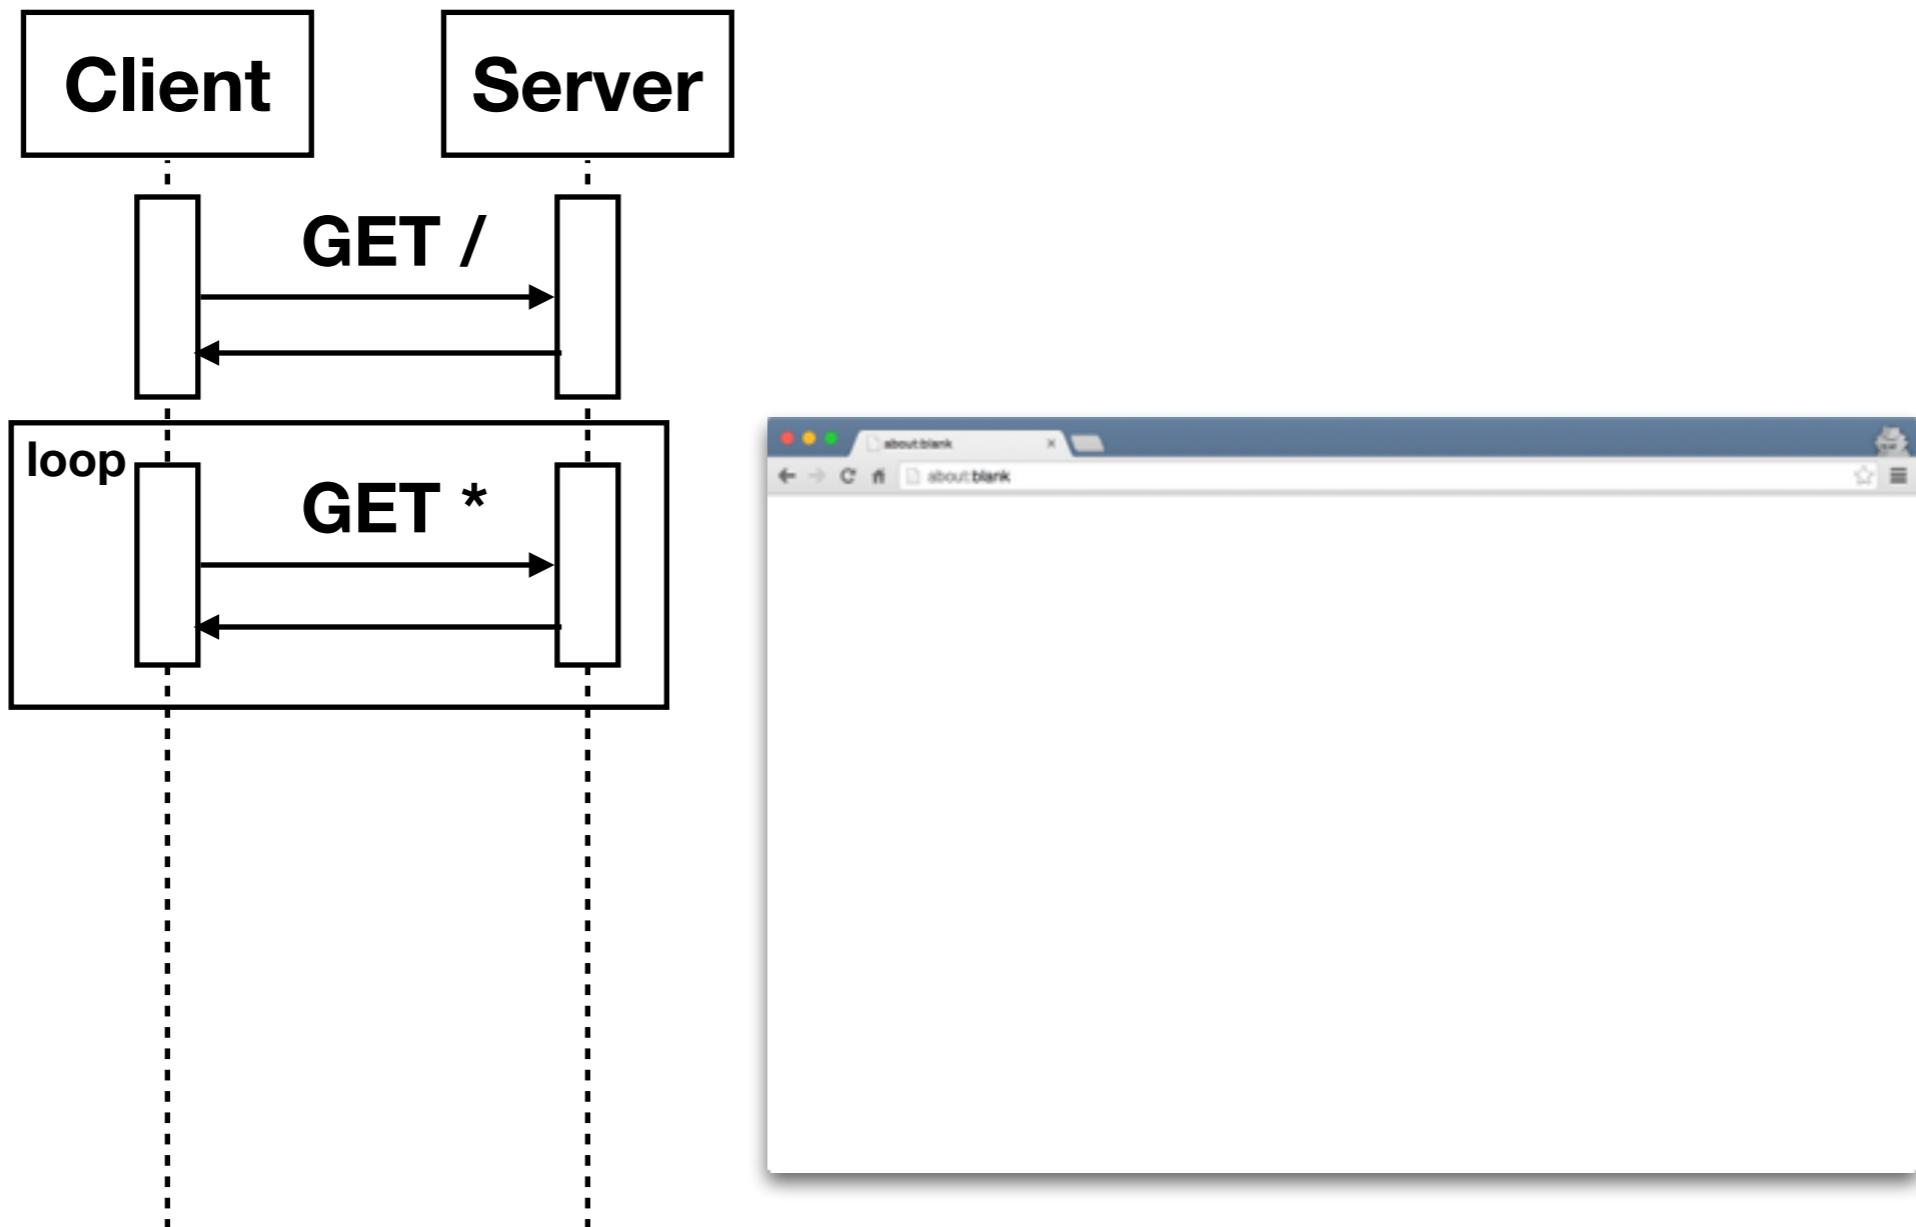

Server

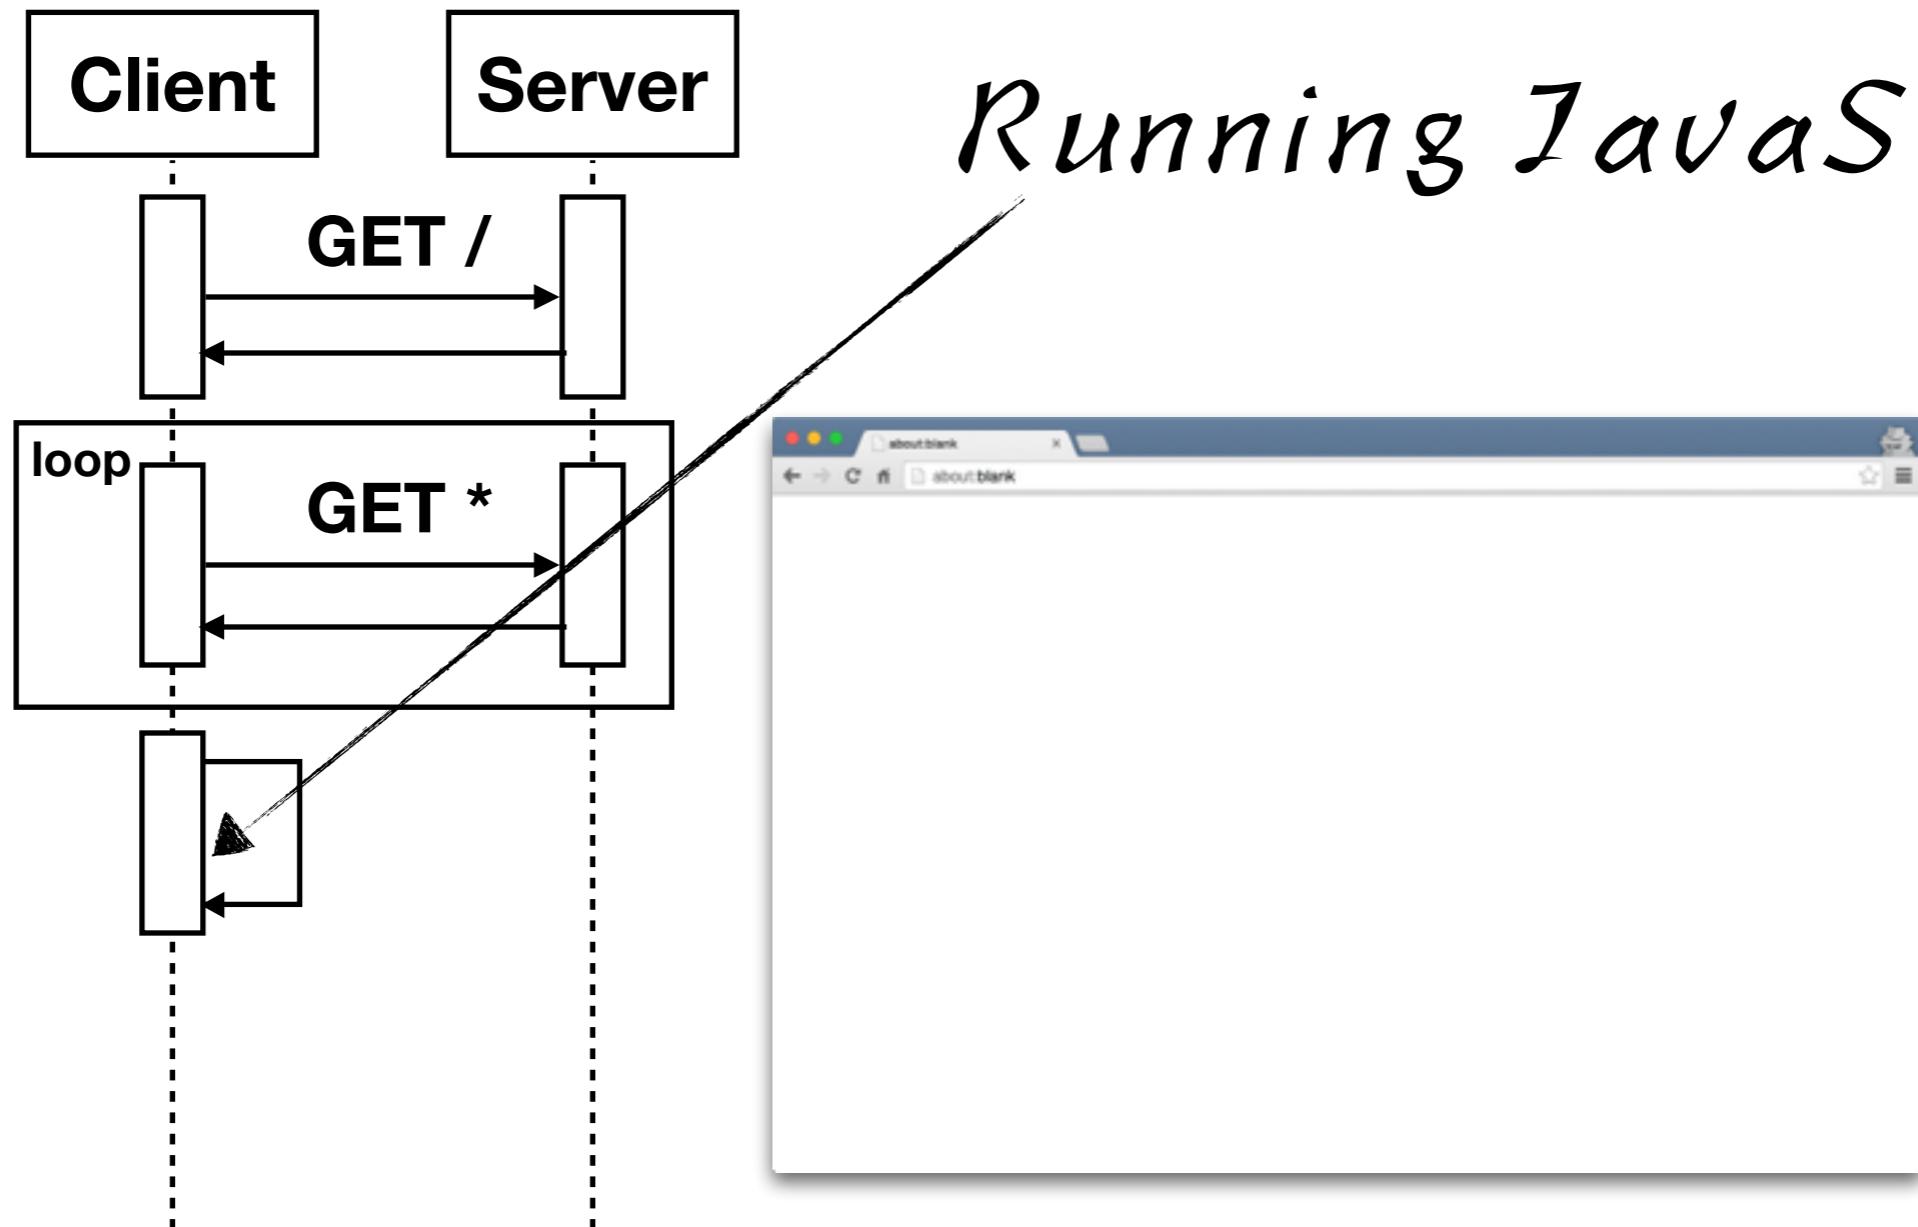

Client

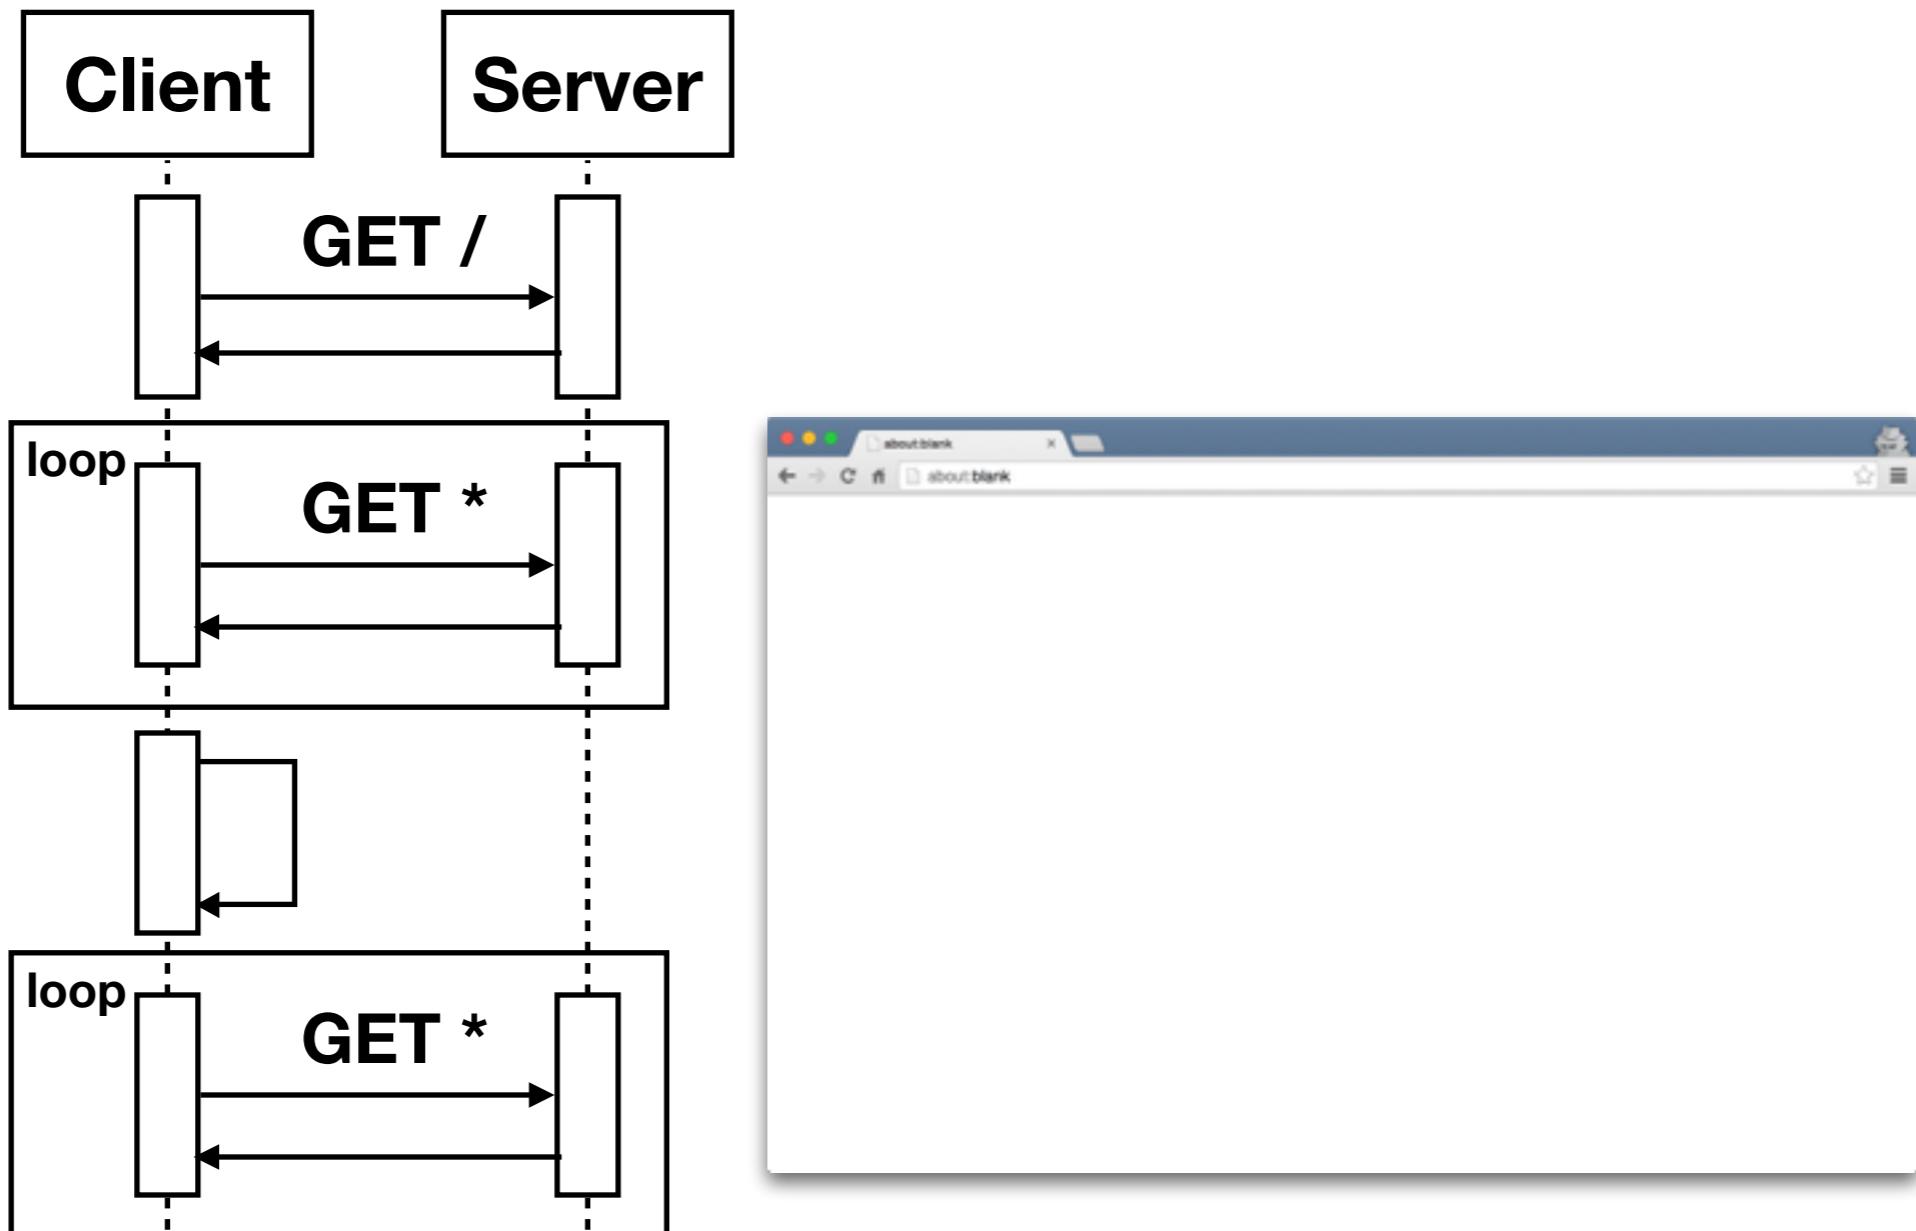

Server

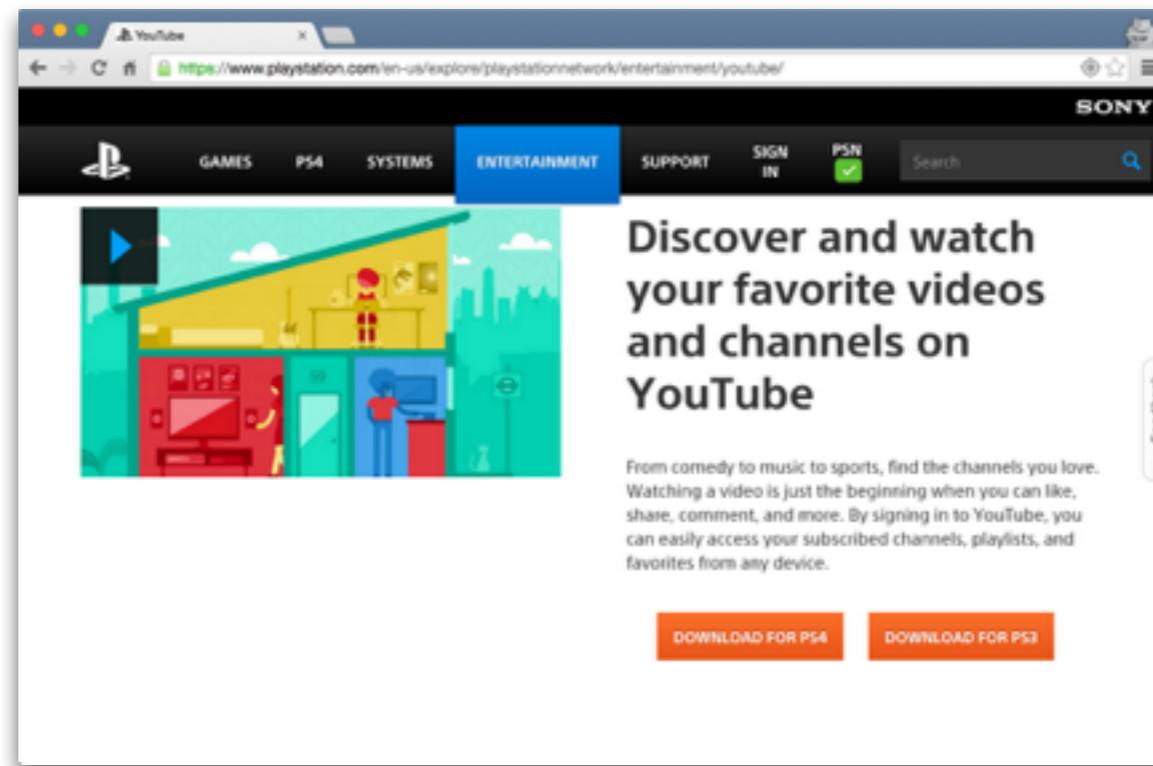

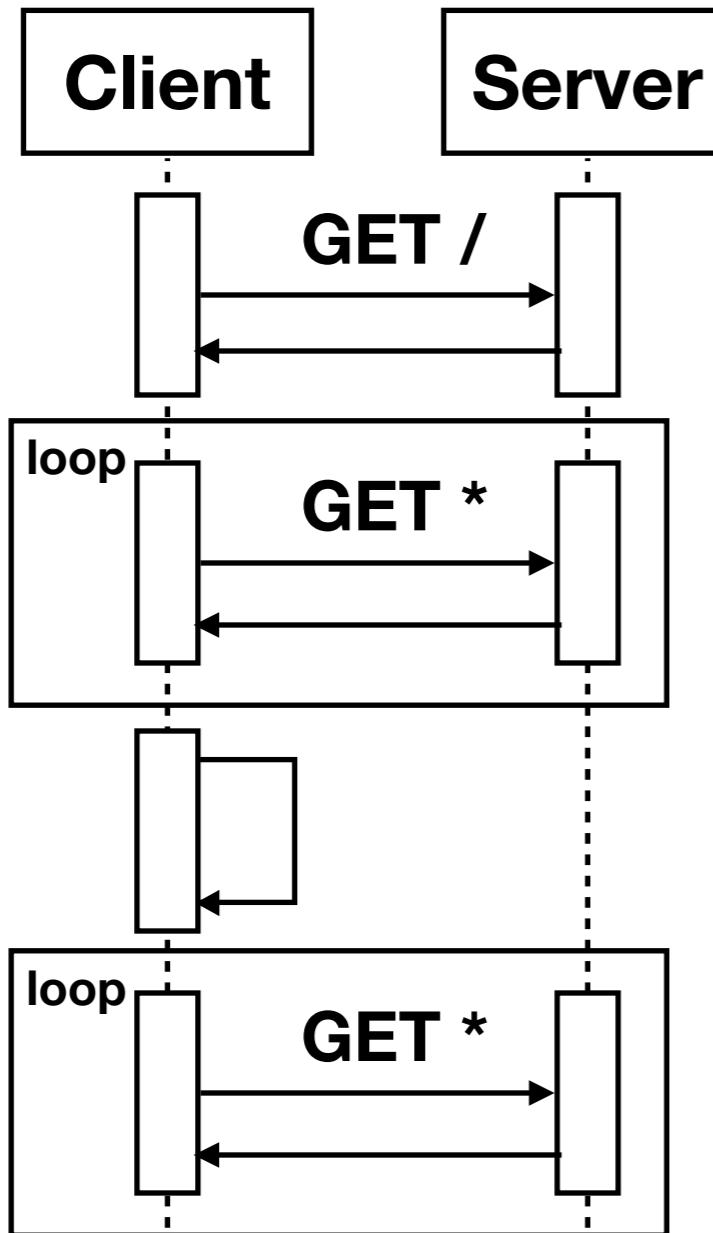

Running JavaScript

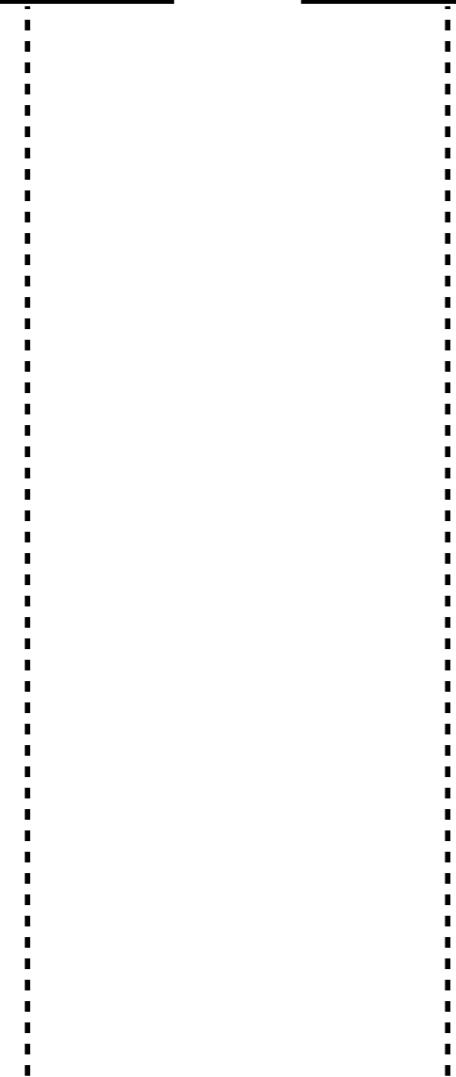

server-side rendering

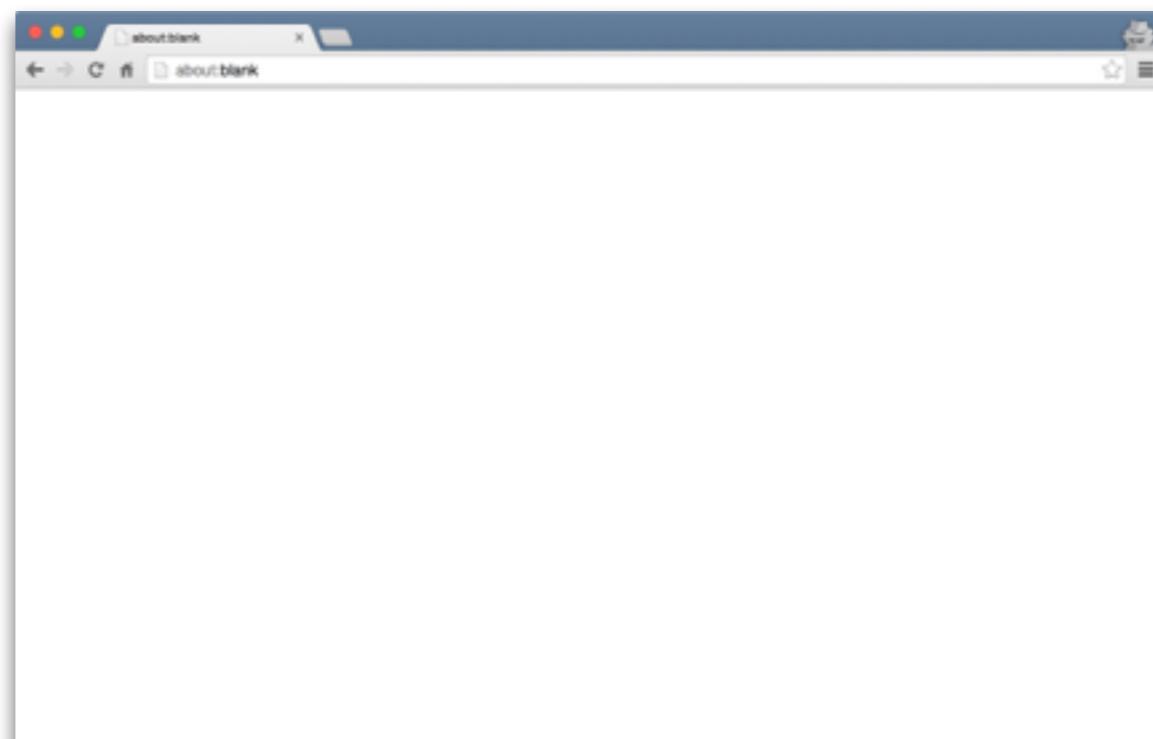

Client

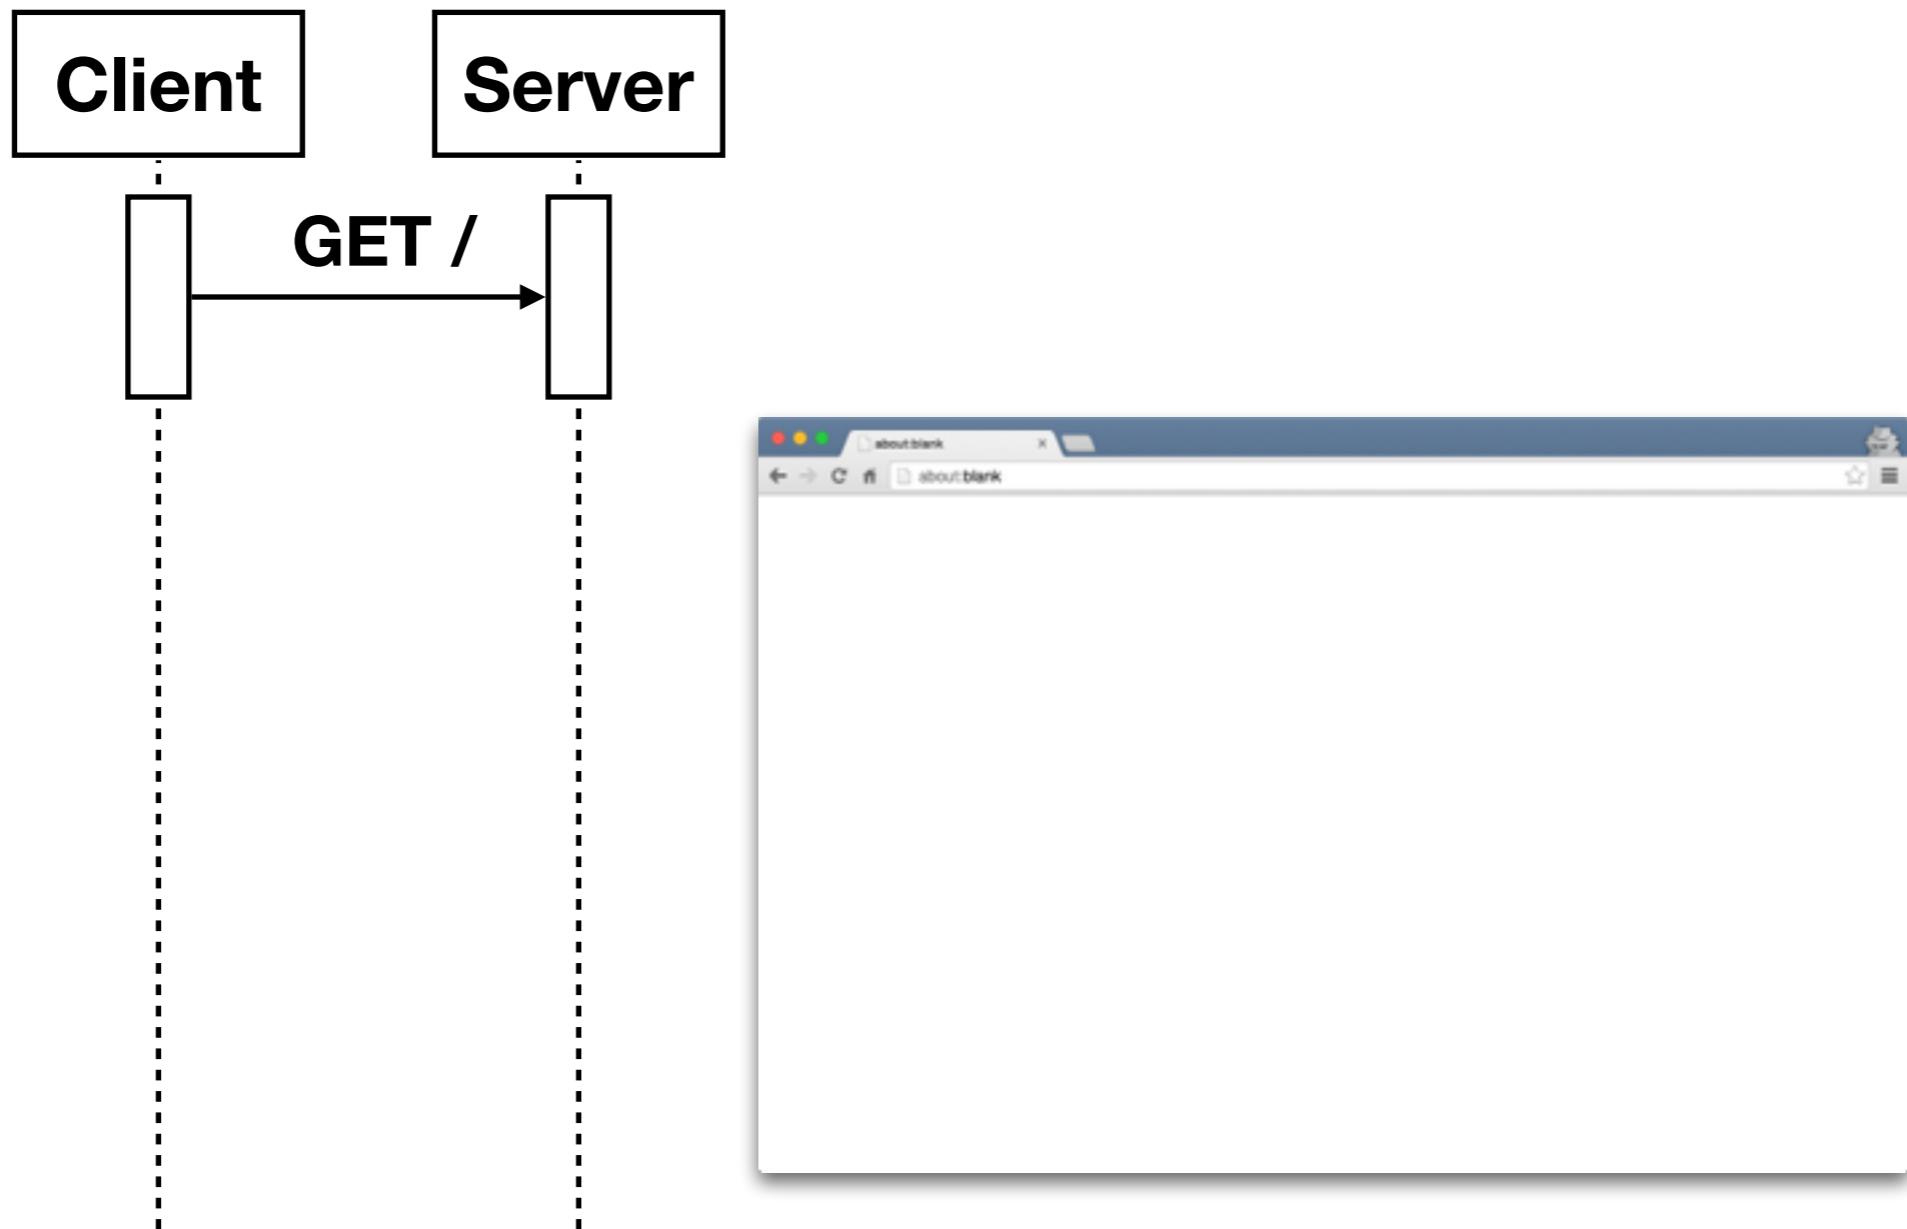

Server

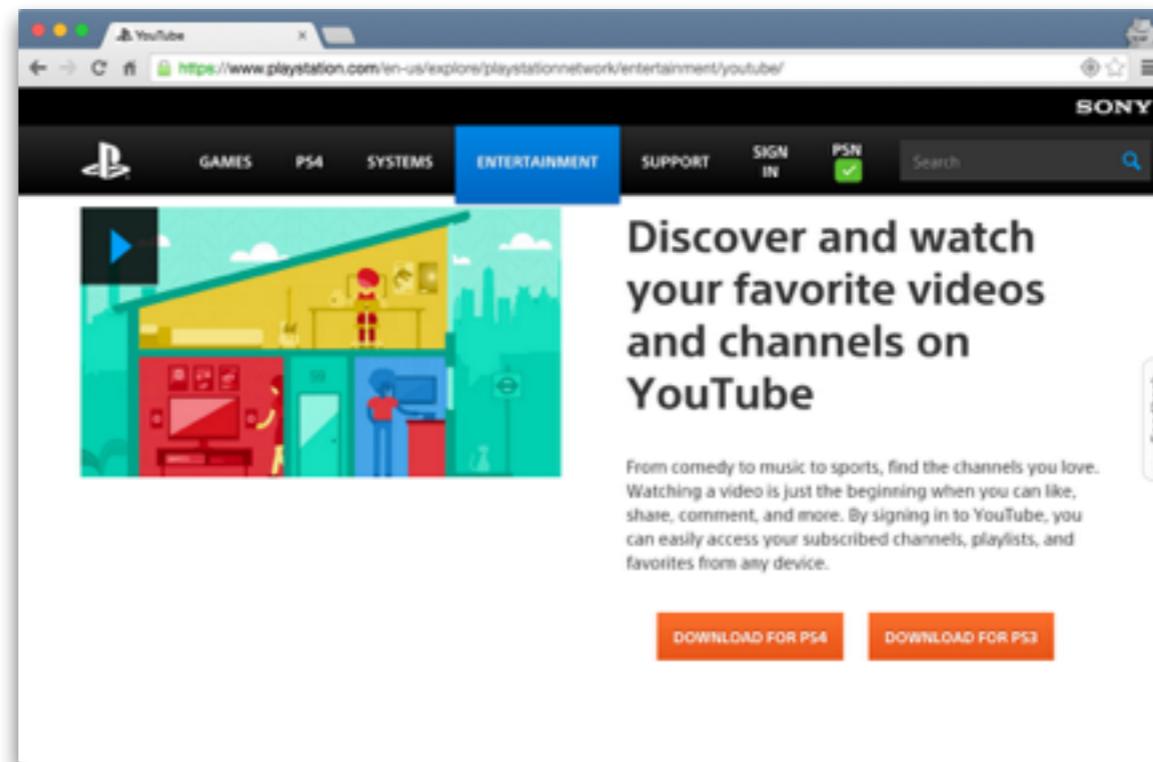

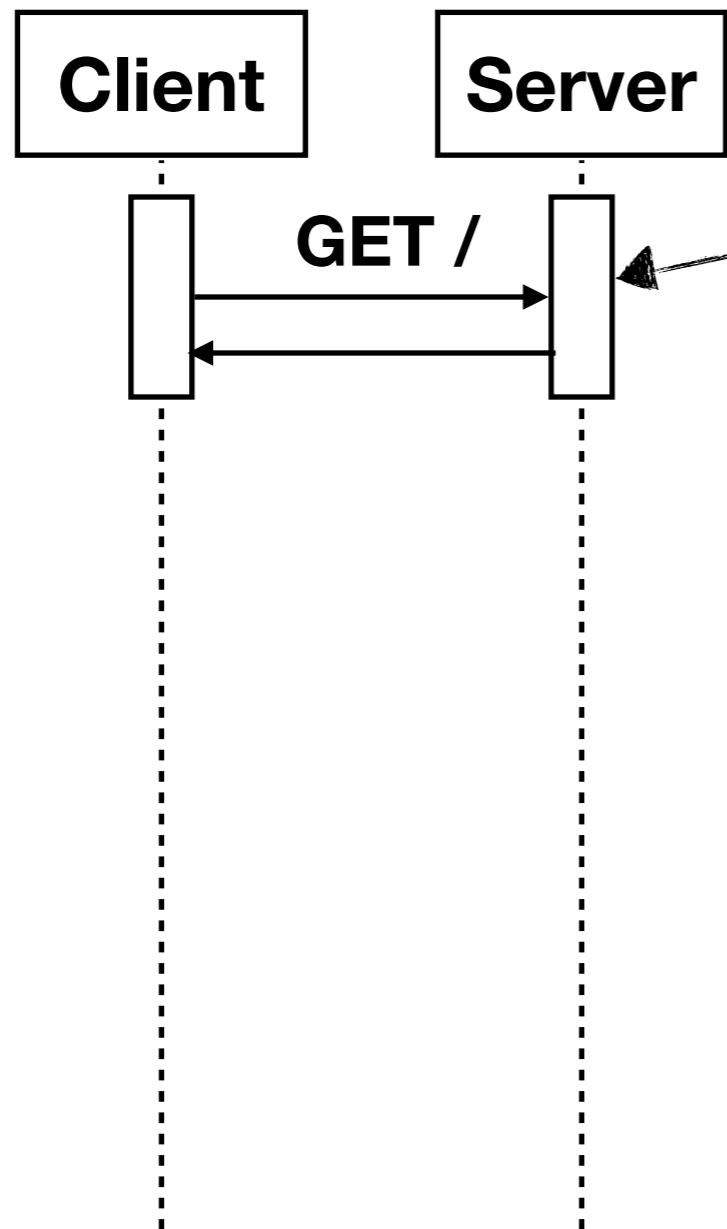

Client

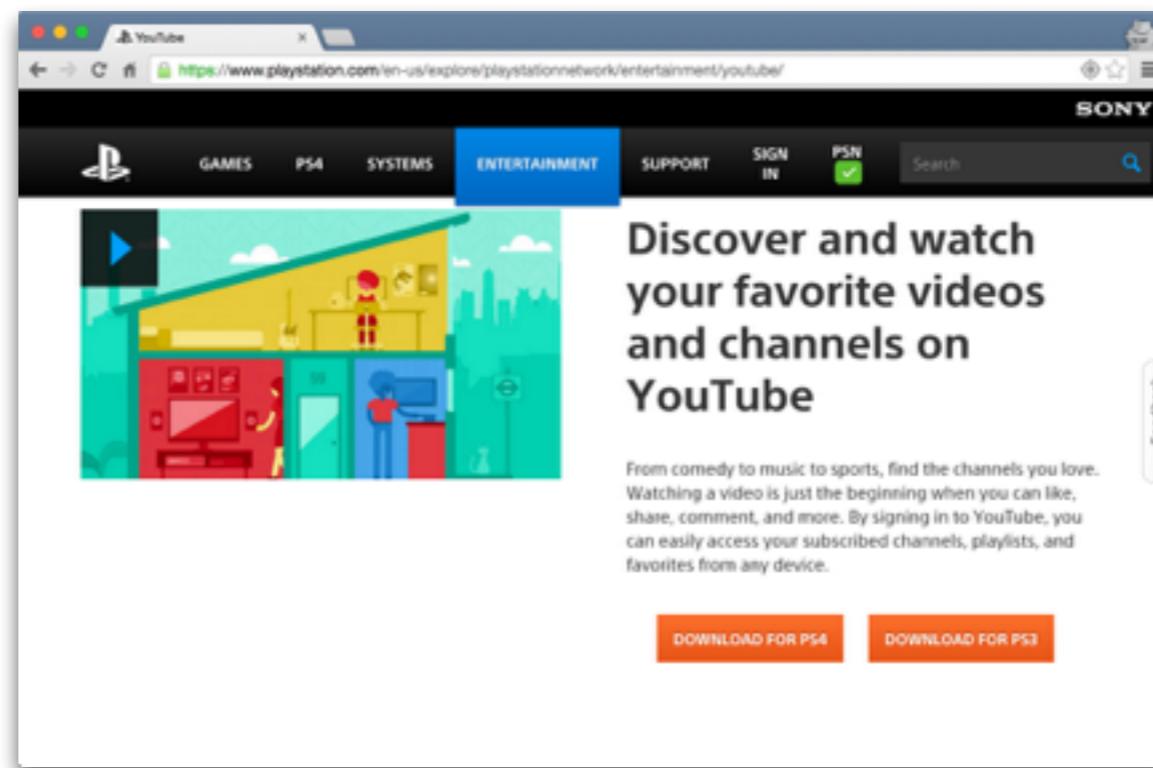

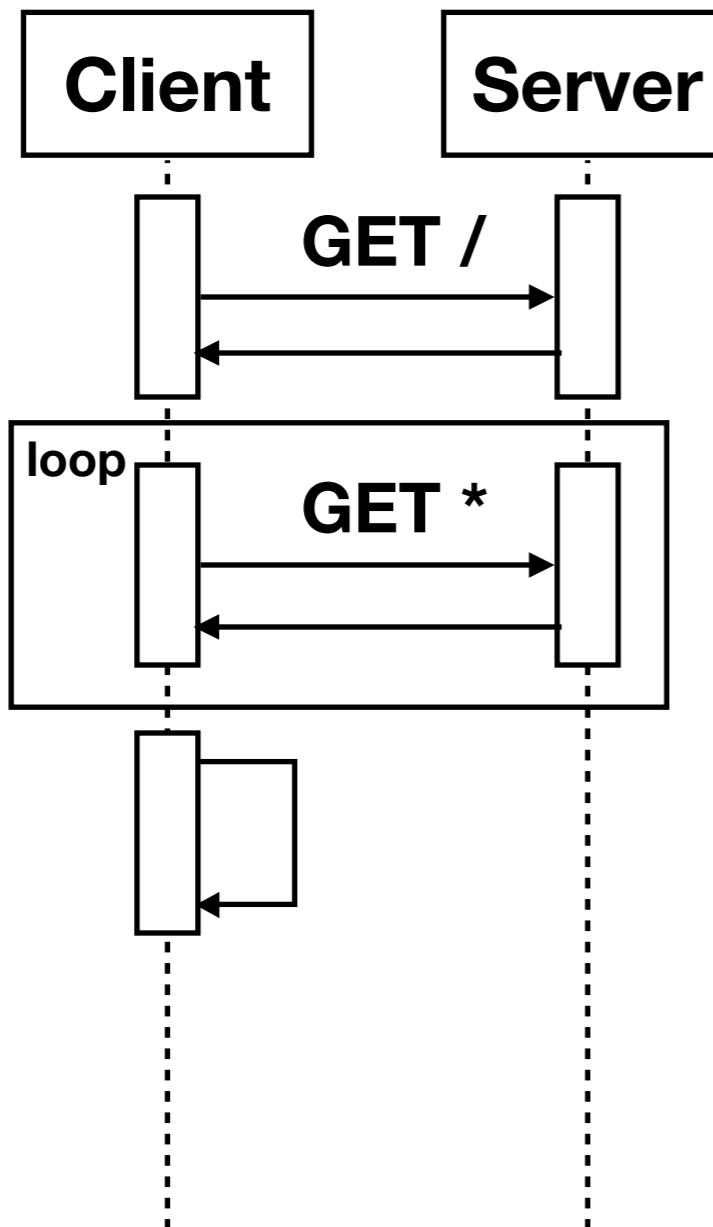

Server

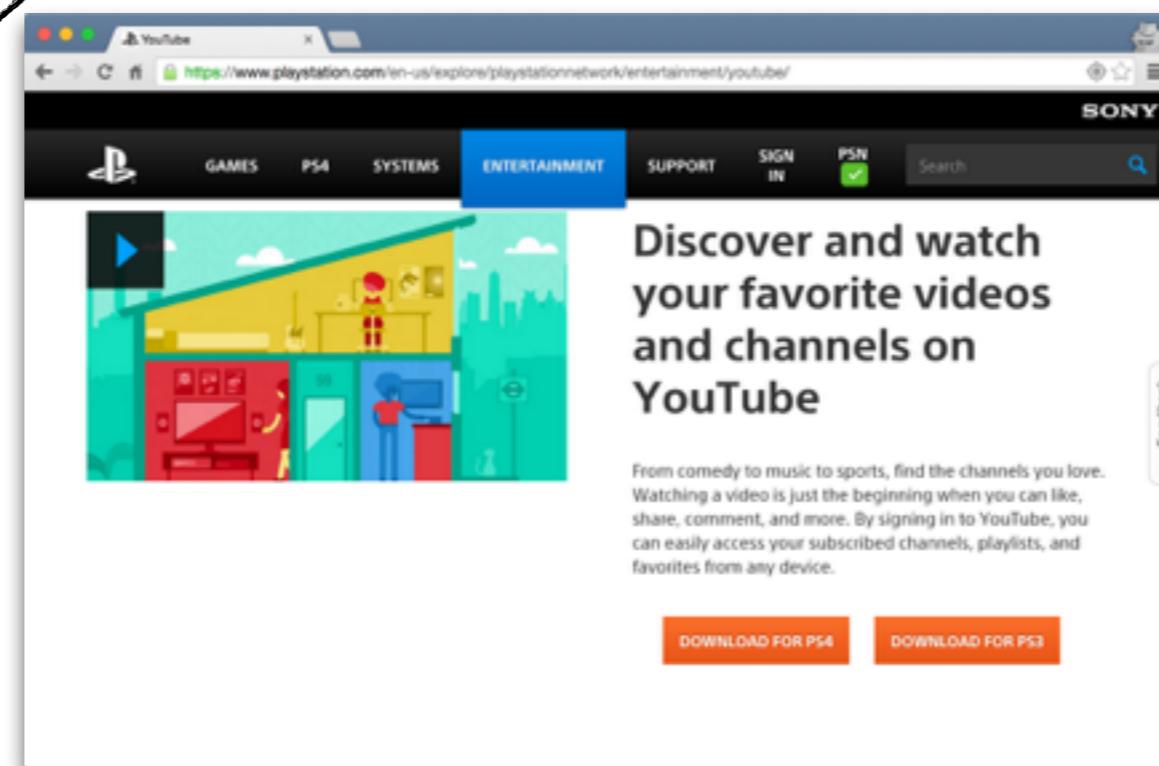

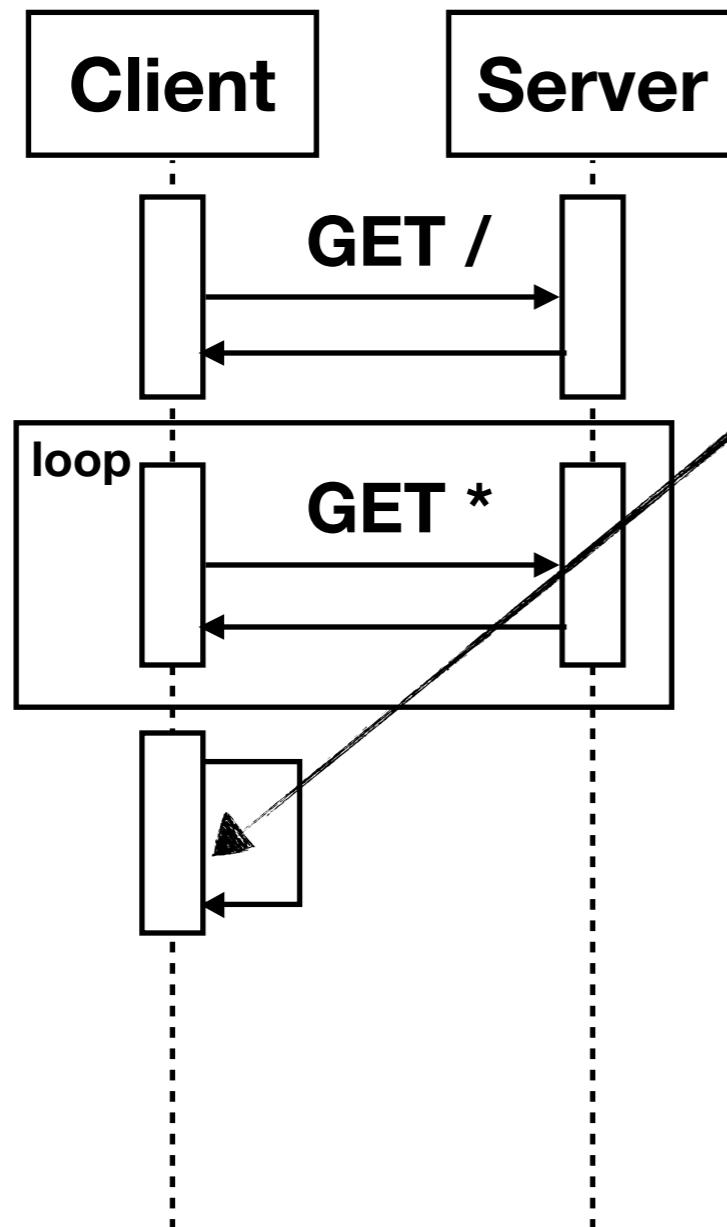

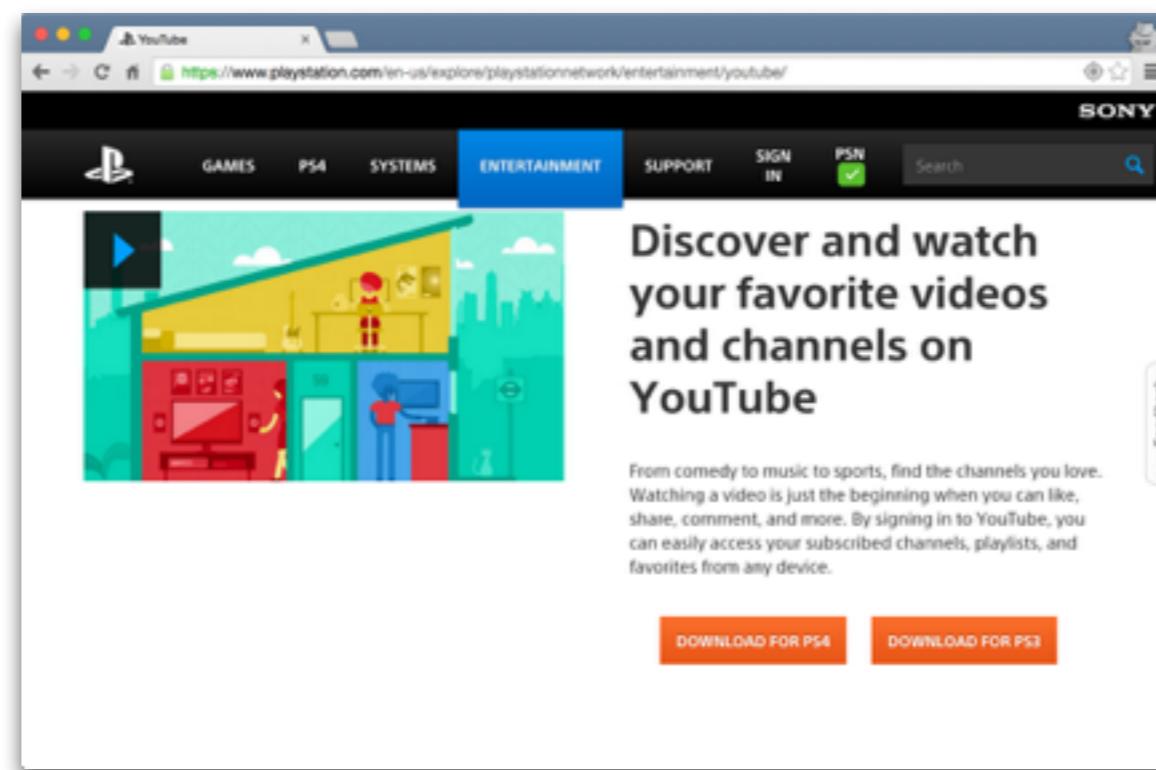

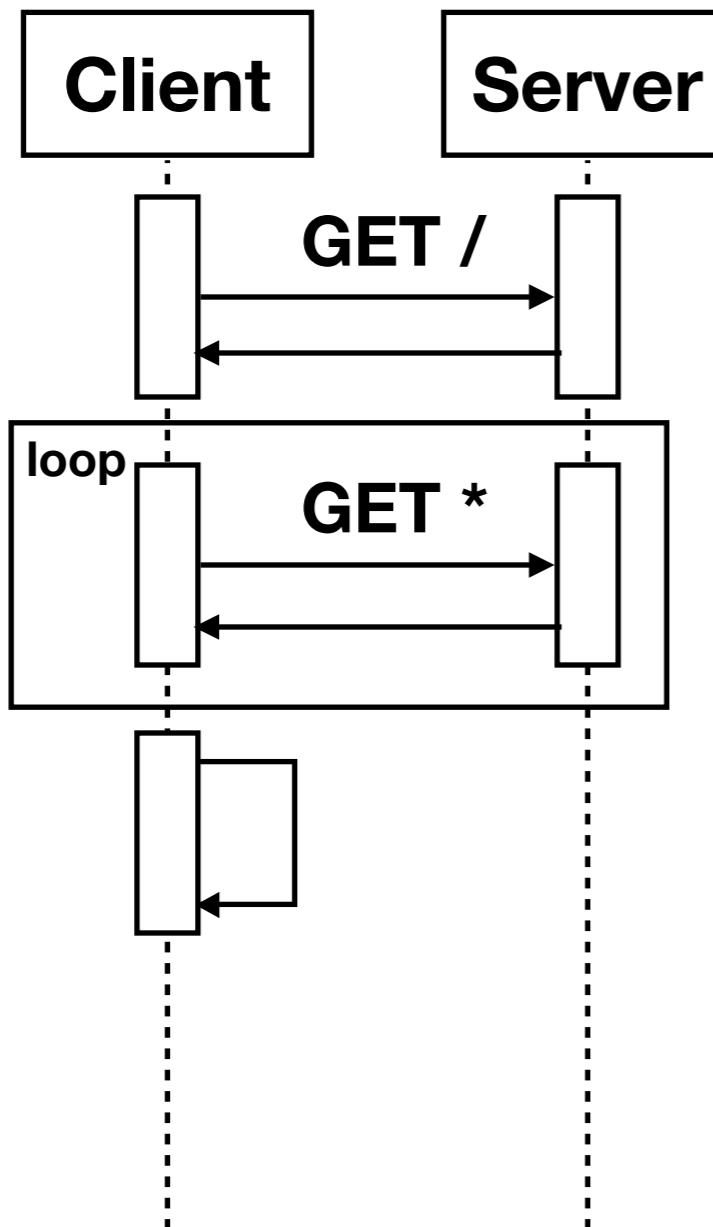

Running JavaScript

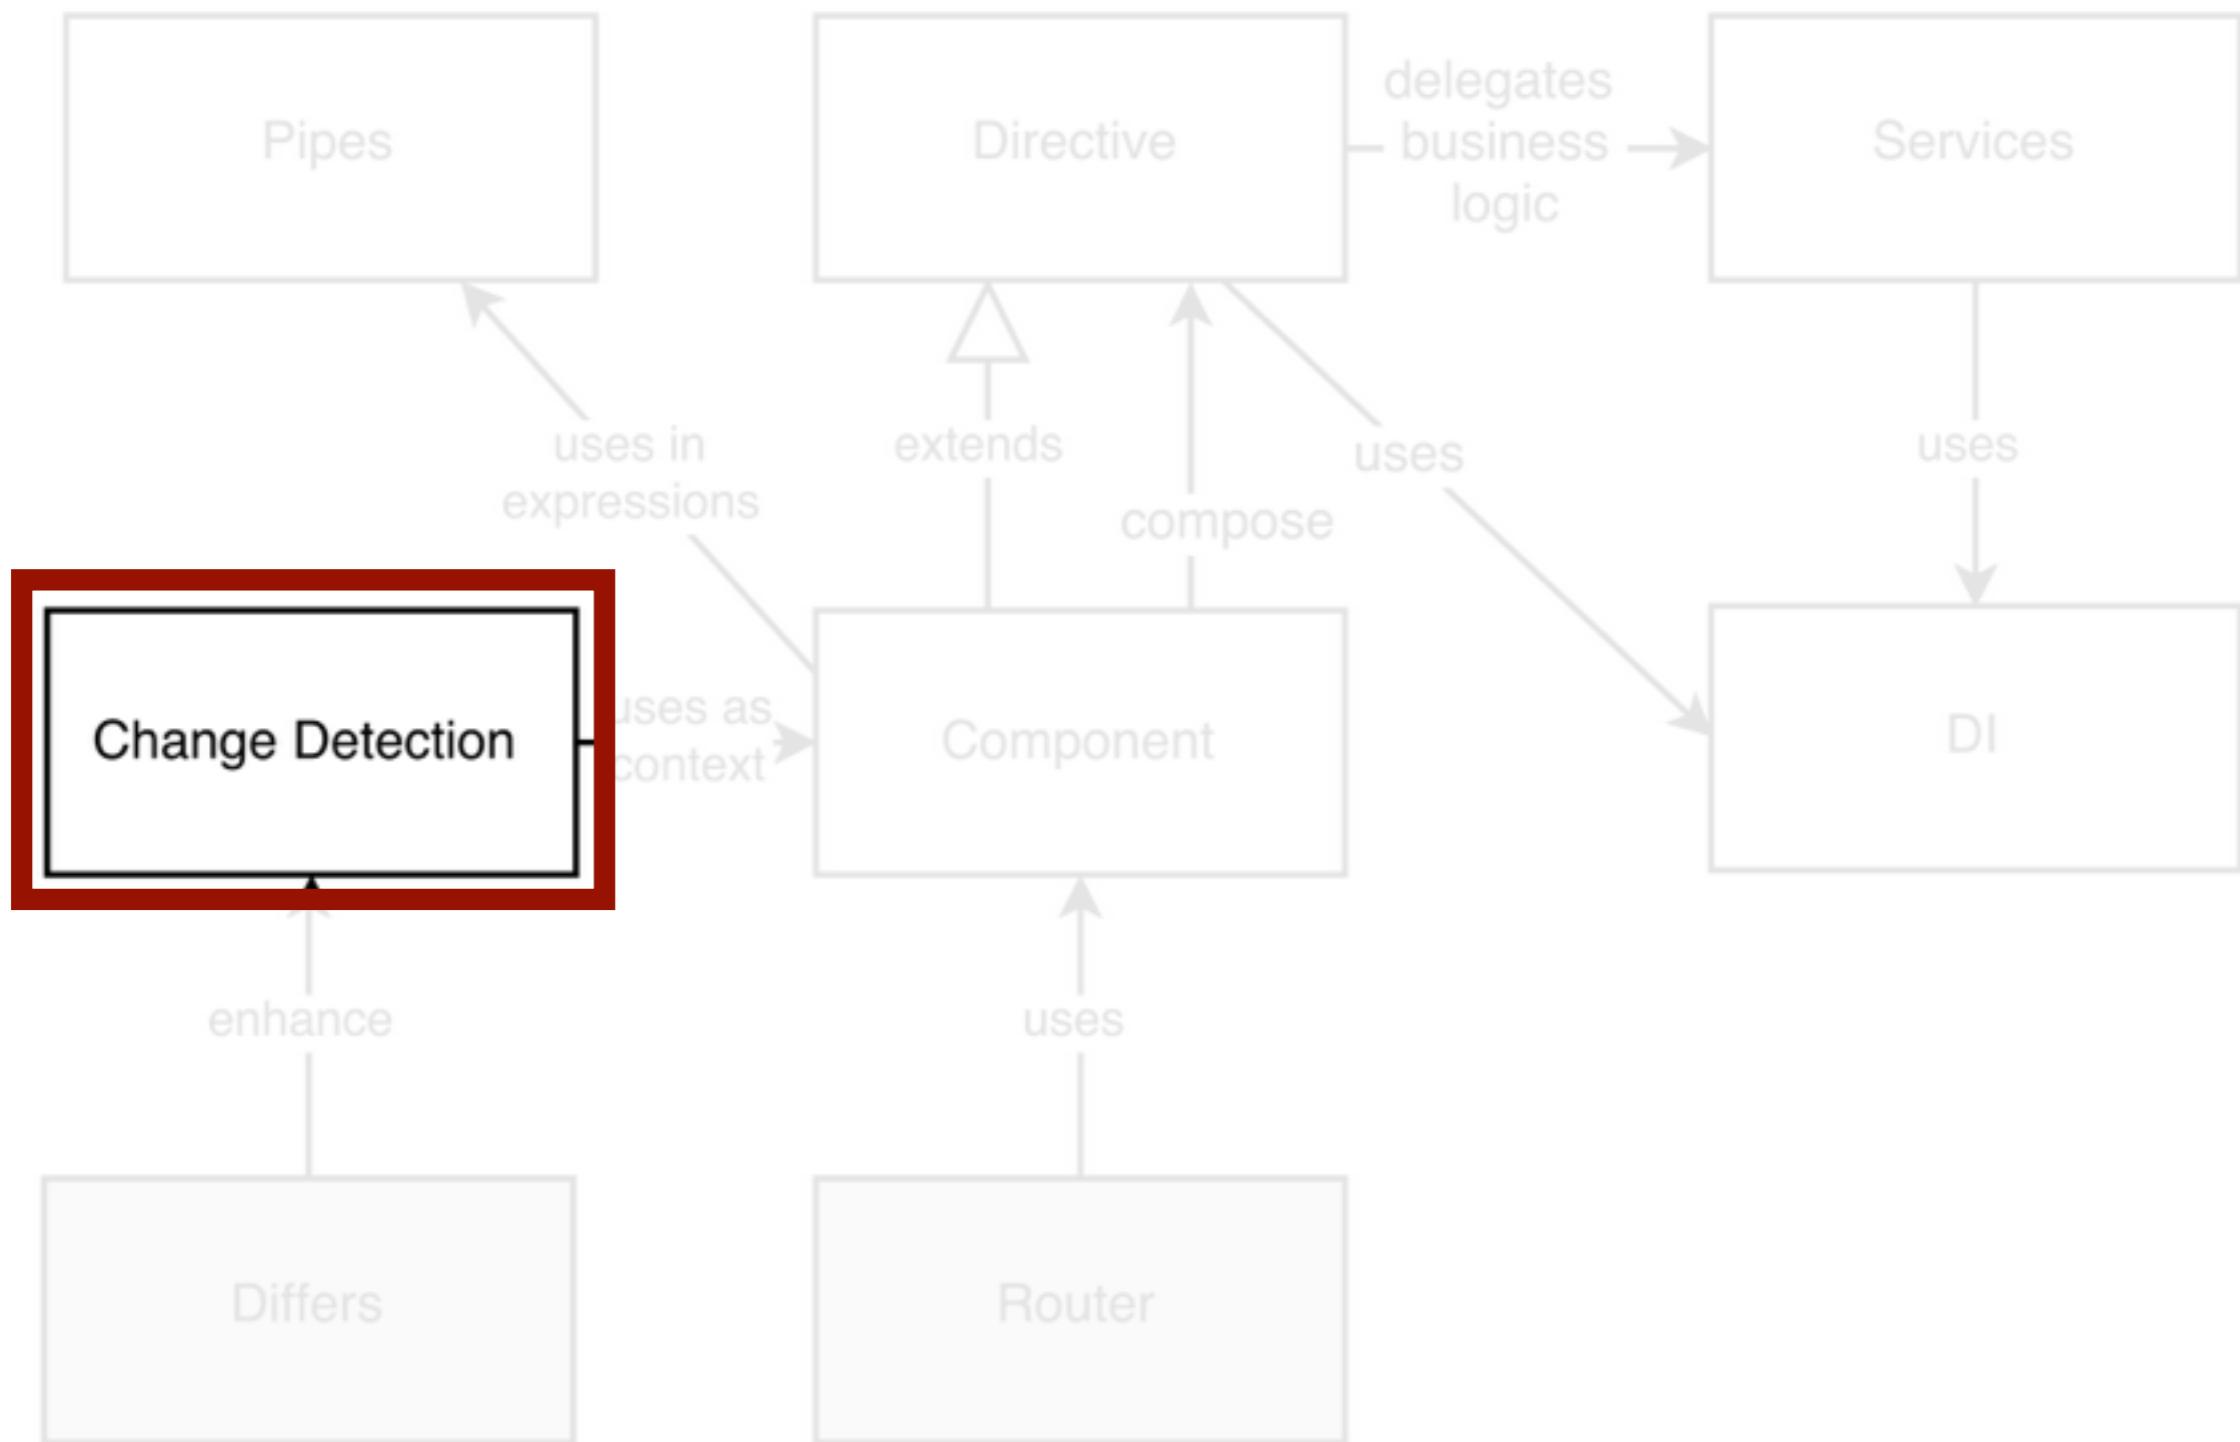

Running JavaScript

Change detection can be
run into **separate process**

Benefits of WebWorkers

Application logic doesn't block render thread

Run application across multiple windows or frames

Better compete performance-wise with native mobile apps

Test without the browser

Works with all modern browsers (IE 10+)

Angular 2

x

Angular 2 is...

rewritten from scratch

...developed in a
different language

...completely
incompatible API

...brand
new building blocks

Why?

Web have moved forward

WebWorkers

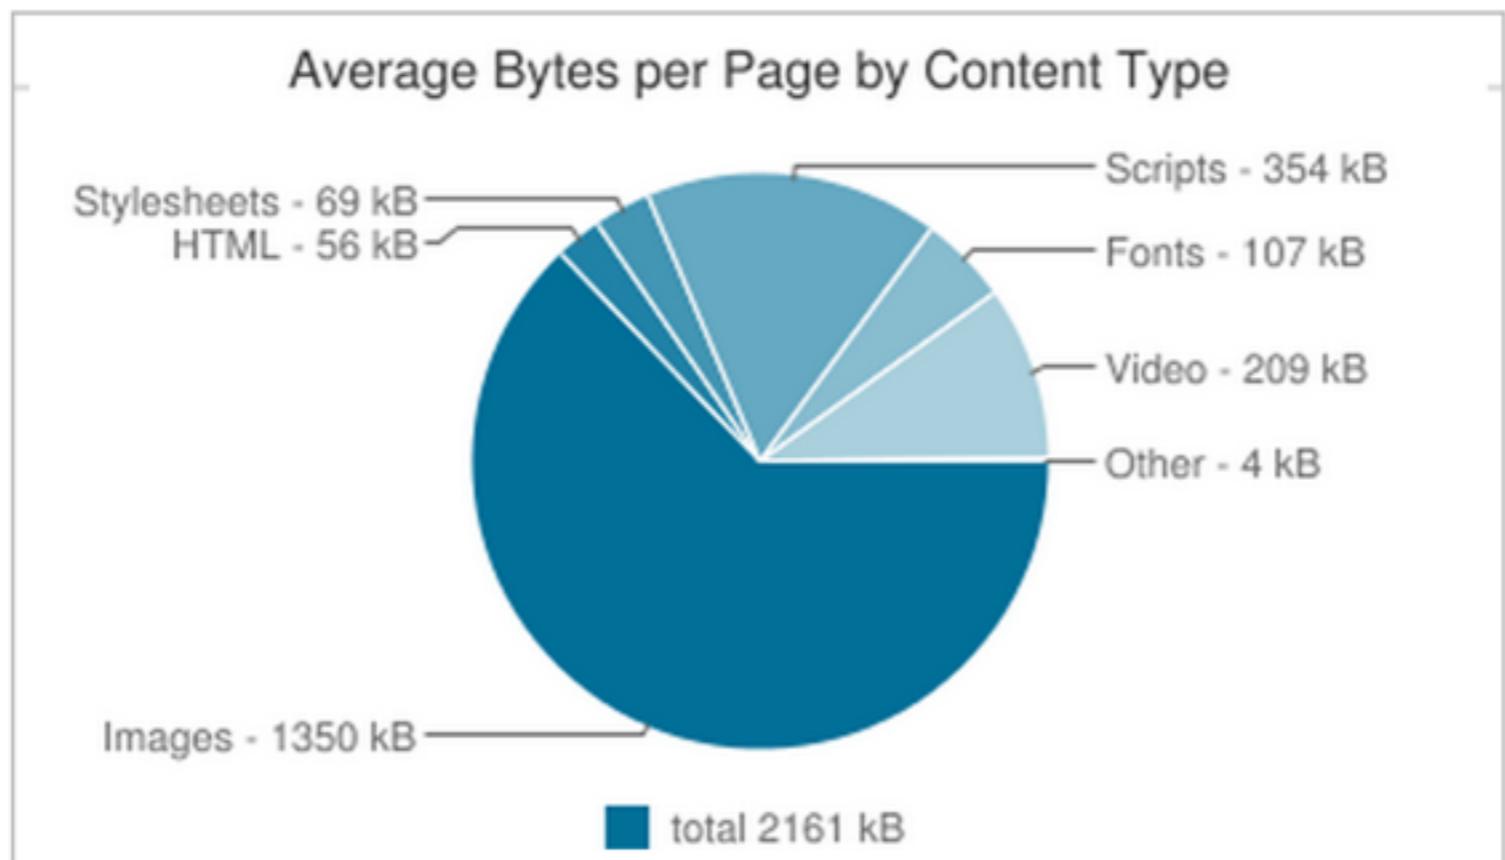

**Reactive
Extensions
(Rx)**

Mutable state

A photograph of a young man with short brown hair, wearing a red and white horizontally striped t-shirt. He is holding his hands up to his cheeks, fingers spread, with a surprised or shocked expression on his face. He is wearing a gold watch on his left wrist. The background is a plain, light-colored wall.

Tangled data-flow

Action creators are helper methods, collected into a library, that create an action from method parameters, assign it a *type* and provide it to the dispatcher.

Every action is sent to all stores via the *callbacks* the stores register with the dispatcher.

After stores update themselves in response to an action, they emit a *change* event.

Special views called *controller-views*, listen for *change* events, retrieve the new data from the stores and provide the new data to the entire tree of their child views.

...we will make the
transition process boring...

Pascal Precht 

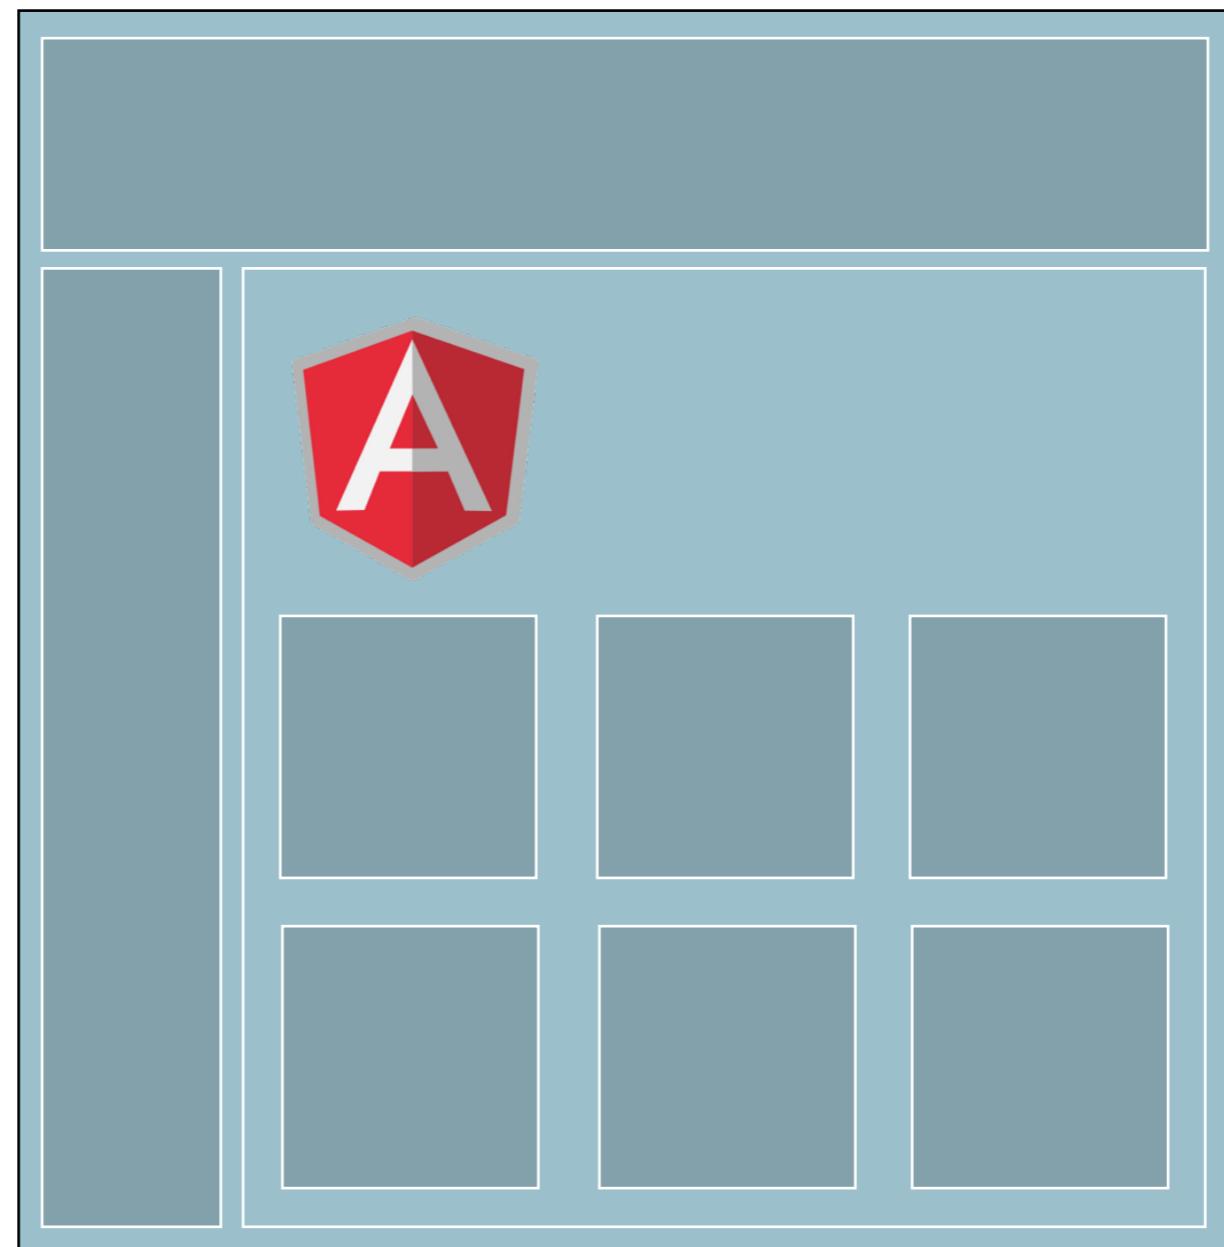

@PascalPrecht

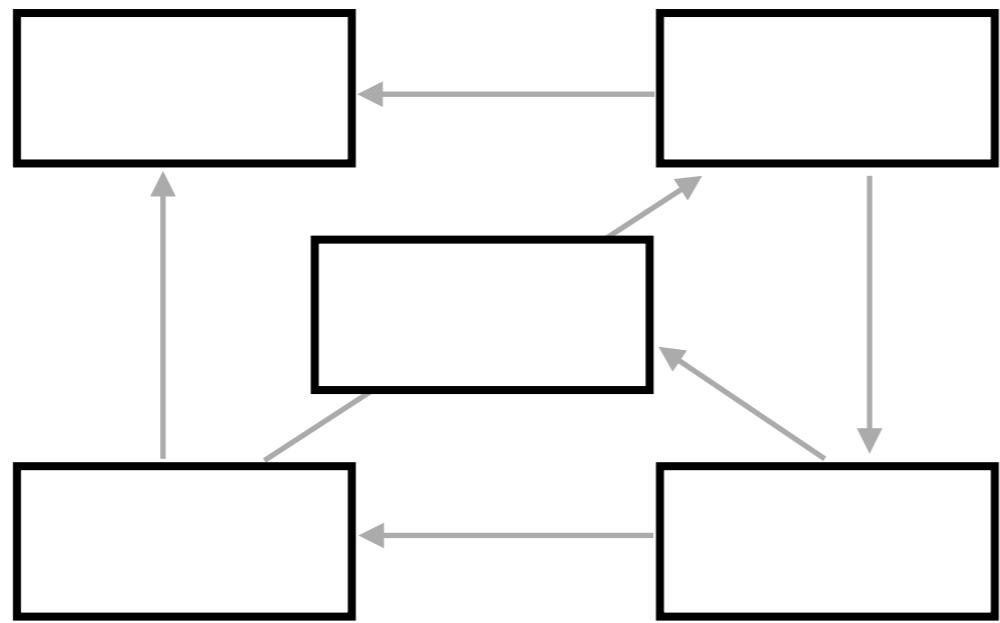

Remember when [@mhevery](#) said at [@angularru](#) that upgrading to Angular 2 will be boring? Well.. Lemme tell you sth. He didn't lie.
